

Now the sense of depth associated with the colours is in conflict with the spatial depth of the objects. Although the furthest object is furthest away, its colour attracts the most attention and brings it to the front.

Using more saturated colours on the objects in the front creates the sense of depth. Objects further away have less saturated colours.

Colour theory

In the book applied Visual colour theory, all colours are expressed in terms of their hue, saturation and brightness (p. vi). Using the colour theory can help you identify and choose colour schemes.

Here are some widely used colour schemes to create unity:

- Monochromatic: a colour has various shades and tints.
- Analogous colours next to each other on the colour wheel. Differences in saturation can be applied. This scheme is generally perceived as calm and serene.
- Complementary colours opposite each other on the colour wheel. Generally this is perceived as dynamic and active. (Search and try)
- Triadic colours derived from the colour wheel as a triangle. The best known examples of this is the primary colour combination, which is very appealing to children (try it! this is their first 'learning product' book).

Be aware with an analogous colour scheme only few small colour contrasts. Of course, contrasts such as dark versus bright colours when various shades and tints for colour are applied. The usage of the saturation degree and the colour scheme (the colour wheel) need to it shows which colour is less than used.
