FORMULA MANIPULATION

When doing calculations, you are usually given a formula. But you are only ever given the formula when you need to solve for one variable. If you require values for another variable in the formula, you need to rearrange it.

main-pb

Rearrange the formula to solve for Y

$$X = \frac{Y}{2}$$

step 1: identify the variable you need to solve for. (The variable you need to get rid of is on the left side of the equation)

step 2: To get rid of something, you do the opposite of what it is doing.

step 3: identify the variable you need to solve for. (The variable you need to get rid of is on the left side of the equation)

step 4: To get rid of something, you do the opposite of what it is doing.

step 5: everything you do to one side of the equation, you have to do to the other side.

Final formula: $Y = 2X$
