From the first appearance of the classic *The Spectrum Analysis* in 1885 to the present the field of emission spectroscopy has been evolving and changing Over the last 20 to 30 years in particular there has been an explosion of new ideas and developments Of late the aura of glamour has supposedly been transferred to other techniques but nevertheless it is estimated that 75% or more of the analyses done by the metal industry are accomplished by emission spectroscopy Further the excellent sensitivity of plasma sources has created a demand for this technique in such divergent areas as direct trace element analyses in polluted waters Developments in the replication process and advances in the art of producing ruled and holographic gratings as well as improvements in the materials from which these gratings are made have made excellent gratings available at reasonable prices This availability and the development of plane grating mounts have contributed to the increasing popularity of grating spectrometers as compared with the large prism spectrograph and concave grating mounts Other areas of progress include new and improved methods for excitation the use of controlled atmospheres and the extension of spectrometry into the vacuum region the widespread application of the techniques for analysis of nonmetals in metals the increasing use of polychrometers with concave or echelle gratings and improved readout systems for better reading of spectrographic plates and more efficient data handling

Donselaar, Jochen Bundschuh, Ravi Naidu, 2016-06-08 The Congress Arsenic in the Environment offers an international multi and interdisciplinary discussion platform for research and innovation aimed towards a holistic solution to the problem posed by the environmental toxin arsenic with considerable societal impact The congress has focused on cutting edge and breakthrough research in physical chemical toxicological medical agricultural and other specific issues on arsenic across a broader environmental realm The Congress Arsenic in the Environment was first organized in Mexico City As2006 followed by As2008 in Valencia Spain As2010 in Tainan Taiwan As2012 in Cairns Australia and As2014 in Buenos Aires Argentina The 6th International Congress As2016 was held June 19 23 2016 in Stockholm Sweden and was entitled Arsenic Research and Global Sustainability The Congress addressed the broader context of arsenic research along the following themes Theme 1 Arsenic in Environmental Matrices and Interactions Air Water Soil and Biological Matrices Theme 2 Arsenic in Food Chain Theme 3 Arsenic and Health Theme 4 Clean Water Technology for Control of Arsenic Theme 5 Societal issues Policy Studies Mitigation and Management Long term exposure to low to medium levels of arsenic via contaminated food and drinking water can have a serious impact on human health and globally more than 100 million people are at risk Since the end of the 20th century arsenic in drinking water mainly groundwater has emerged as a global health concern In the past decade the presence of arsenic in plant foods especially rice has gained increasing attention In the Nordic countries in particular the use of water soluble inorganic arsenic chemicals e g chromated copper arsenate CCA as wood preservatives and the mining of sulfidic ores have been flagged as health concern The issue has been accentuated by discoveries of naturally occurring arsenic in groundwater primarily in the private wells in parts of the Fennoscandian Shield and in sedimentary formations with potentially detrimental effects on public health Sweden has been at the forefront of research on the health effects of arsenic technological solutions for arsenic removal and sustainable mitigation measures for developing countries Hosting this Congress in Sweden was also relevant because historically Sweden has been one of the leading producer of As₂O₃ and its emission from the smelting industries in northern Sweden and has successfully implemented actions to reduce the industrial emissions of arsenic as well as minimizing the use of materials and products containing arsenic in since 1977 The Congress has gathered professionals involved in different segments of interdisciplinary research in an open forum and strengthened relations between academia industry research laboratories government agencies and the private sector to share an optimal atmosphere for exchange of knowledge discoveries and discussions about the problem of arsenic in the environment and catalyze the knowledge generation and innovations at a policy context to achieve the goals for post 2015 Sustainable Development

Validation in Chemical Measurement Paul De Bièvre,Helmut Günzler,2005-01-12 The validation of analytical methods is based on the characterisation of a measurement procedure selectivity sensitivity repeatability reproducibility This volume collects 31 outstanding papers on the topic mostly published in the period 2000 2003 in the journal Accreditation and Quality Assurance They provide the latest understanding and possibly the rationale why it is important to integrate the concept of validation into the standard procedures of every analytical laboratory In addition this anthology considers the benefits to both the analytical laboratory and the user of the measurement results *Water Pollution XIV* S. Hernández,S. Mambretti,2018-08-21 Water pollution problems are of continued importance around the world with an impact on both populated areas and the environment This volume consists of papers presented at the 14th International Conference in the series of Monitoring Modelling and Management of Water Pollution The environmental problems caused by the increase of pollutant loads discharged into natural water bodies requires the formation of a framework for regulation and control This framework needs to be based on scientific results that relate pollutant discharge with changes in water quality The results of these studies allow industry to apply more efficient methods of controlling and treating waste loads and water authorities to enforce appropriate regulations regarding this matter Environmental problems are essentially interdisciplinary Engineers and scientists working in this field must be familiar with a wide range of issues including the physical processes of mixing and dilution chemical and biological processes mathematical modelling data acquisition and measurement to name but a few In view of the scarcity of available data it is important that experiences are shared on an international basis Thus a continuous exchange of information between scientists from different countries is essential Topics covered include Water contamination Monitoring modelling and forecasting Water management Wastewater management Groundwater and aquifers Flood damage Freshwater quality Coastal and offshore pollution Health risk studies Agricultural contamination
