The Middle Voice in Baltic Axel Holvoet, 2020-05-15 The fifth volume in the VARGReB series is a monograph presenting a collection of studies on middle voice grams in Baltic that is on a widely ramified family of constructions with different syntactic and semantic properties but sharing a morphological marker of reflexive origin Though the emphasis is on Baltic ample attention is given to other languages as well especially to Slavonic The book offers many new insights into questions of syntactic and semantic interpretation correct demarcation and diachronic explanation of middle voice grams The relationship between reflexive and middle the workings of metonymy changes in syntactic structure and lexical input as factors determining diachronic shifts within the middle voice domain and transitions from one middle voice gram to another these are among the topics discussed in the book which beyond its relevance to Baltic and Slavonic scholarship is also a contribution to the typology of the middle voice

Automotive Aerodynamics Joseph Katz, 2016-05-02 The automobile is an icon of modern technology because it includes most aspects of modern engineering and it offers an exciting approach to engineering education Of course there are many existing books on introductory fluid aero dynamics but the majority of these are too long focussed on aerospace and don t adequately cover the basics Therefore there is room and a need for a concise introductory textbook in this area Automotive Aerodynamics fulfils this need and is an introductory textbook intended as a first course in the complex field of aero fluid mechanics for engineering students It introduces basic concepts and fluid properties and covers fluid dynamic equations Examples of automotive aerodynamics are included and the principles of computational fluid dynamics are introduced This text also includes topics such as aeroacoustics and heat transfer which are important to engineering students and are closely related to the main topic of aero fluid mechanics This

textbook contains complex mathematics which not only serve as the foundation for future studies but also provide a road map for the present text As the chapters evolve focus is placed on more applicable examples which can be solved in class using elementary algebra The approach taken is designed to make the mathematics more approachable and easier to understand

Key features Concise textbook which provides an introduction to fluid mechanics and aerodynamics with automotive applications Written by a leading author in the field who has experience working with motor sports teams in industry Explains basic concepts and equations before progressing to cover more advanced topics Covers internal and external flows for automotive applications Covers emerging areas of aeroacoustics and heat transfer Automotive Aerodynamics is a must have textbook for undergraduate and graduate students in automotive and mechanical engineering and is also a concise reference for engineers in industry

Sustainable Composites for Automotive Engineering Vijay Raghunathan, Sanjay Mavinkere Rangappa, Vinod Ayyappan, Suchart Siengchin, 2025-09-01 Sustainable Composites for Automotive Engineering presents recent trends in this important research field Emphasis is placed on the development characterization and application of lightweight composites in various automobile components The types of materials covered include polymer composites metal matrix and ceramic matrix composites The book takes a 360 degree approach and covers all aspects of the product development cycle including materials selection as well as design and development processes testing characterization modelling and simulation and applications The book will be a valuable reference resource for academic and industrial researchers materials scientists and engineers industrial R D automotive engineers and manufacturers working in the design and development of composite materials for applications in automotive components Provides in depth knowledge about the materials their properties and performance and applications in automotive components Covers polymer matrix composites ceramic matrix and metal based composites Discusses traditional manufacturing methods and recent developments in sustainable green manufacturing and testing of automobile parts with various industrial case studies Includes brake friction materials as well as natural and rubber based composites Covers OEM regulations environmental aspects economic analysis and life cycle assessment of composite based products

Heinemann Economics A2 for AQA Susan Grant, Chris Vidler, Charles Smith, 2003 This text offers clear examples key ideas and activities to ensure full access to the economics specification It also includes exam hints contributed by an examiner from the relevant board
