ABSTRACT

This study aimed to generate organized information on physical characteristics and prediction of live weight using linear body measurements of indigenous sheep breeds in three districts of Kellam Wolega Zone (Sedi Chanka, Dale Sedi, and Hawa Gelan). The main frequently observed coat color pattern of both sex sheep was plain 63.3%, 72.1%, and 86.9% and the main frequently observed coat color type was brown 51.5%, 53.6%, and 55.4% Dale Sedi, Sedi Chanka, and Hawa Gelan districts, respectively. Straight head profiles 85.9%, 93.6%, and 94.6% were mainly observed for sheep in Dale Sedi, Sedi Chanka, and Hawa Gelan districts, respectively. All the sampled female and male sheep had no horns. The most ear form of sheep observed was semi-pendulous 85.1%, 76.7%, and 65.9% for Dale Sedi, Sedi Chanka, and Hawa Gelan districts sheep populations, respectively. The majority of sampled sheep population in Dale Sedi (52.1%) possesses cylindrical and twisted at the end, whereas Sedi Chanka (79.5%) and Hawa Gelan (74.6%) possess a cylindrical and straight tail shape. The majority of the sheep population in the studied districts had no wattle 96.2

Sheep Breed Characterization:

Characterization and Conservation of Indigenous Sheep Genetic Resources: a Practical Framework for Developing Countries ,2011-01-01 **Characterization of Small Ruminant Breeds in West Asia and North Africa: West Asia** ,2005 *Analysis of Genetic Variation in Animals* Mahmut Caliskan,2012-02-29 *Analysis of Genetic Variation in Animals* includes chapters revealing the magnitude of genetic variation existing in animal populations The genetic diversity between and within populations displayed by molecular markers receive extensive interest due to the usefulness of this information in breeding and conservation programs In this concept molecular markers give valuable information The increasing availability of PCR based molecular markers allows the detailed analyses and evaluation of genetic diversity in animals and also the detection of genes influencing economically important traits The purpose of the book is to provide a glimpse into the dynamic process of genetic variation in animals by presenting the thoughts of scientists who are engaged in the generation of new idea and techniques employed for the assessment of genetic diversity often from very different perspectives The book should prove useful to students researchers and experts in the area of conservation biology genetic diversity and molecular biology Phenotypic Characterization, Genetics and Genomics of Livestock in Low Input Systems Mohammed Ali Al Abri,Olivier Hubert Hanotte,Younes Miar,2022-10-19 **Genomic characterization of animal genetic resources** Food and Agriculture Organization of the United Nations,Ajmone-Marsan, P,Boettcher, P. J.,Ginja, C.,Kantanen J.,Lenstra, J.A,2023-01-12 Molecular biotechnologies have developed rapidly and substantially since the release of these previous guidelines The livestock sector has been an active participant in the so called genomic revolution Advancements in the sequencing of genomes and related genotyping methods have created opportunities for gathering much more information on the molecular level than ever possible at a faster rate and for exponentially decreased costs Scientists and other livestock stakeholders in countries with highly developed economies have been among the main beneficiaries of this revolution However the greatly decreased costs of genomic applications have also created opportunities in countries with developing and transitional economies In many instances the lack of awareness of these opportunities and in the technical capacity for the full application of genomic tools may represent a greater obstacle to their utilization than the expenses involved The development of these guidelines and the subsequent application of the information contained herein may help to bridge this gap bringing new opportunities to light and transferring knowledge that can be used to increase the genetic characterization of AnGR and subsequently improve the sustainable use and conservation of livestock genetic diversity Characterization of Small Ruminant Breeds in West Asia and North Africa: North Africa ,2005 *Biodiversity* R C Sobti,2022-12-30 The term biodiversity or biological diversity describes the variety of living beings on Earth encompassing microorganisms plants animals and ecosystems such as coral reefs forests and deserts In fact it also represents a wealth of biological resources available to us Today instead of exploring and preserving its unmapped biodiversity mankind has gone away from mother

nature conquering the domain through relentless exploitation This has resulted in an ecological imbalance and thereby has posed serious threat to biodiversity Declining biodiversity is therefore a concern for countless reasons Biodiversity's wealth of genetic information can be conserved by storing biological material from endangered species Cell lines gametes and embryos are preserved so that in case a species becomes extinct or there is a need to increase the population of the species then cloning and artificial reproductive techniques can be used to revive and reproduce the said species The present volume discusses the biodiversity of specific animal groups such as cnidarians and fish as well as potential risks to and methods for conserving some of them The following important aspects are addressed 1 The importance of biodiversity in maintaining ecosystem balance for sustainability 2 The emerging role of biodiversity as a source of important materials pharmaceuticals food and so on as such or through genetic manipulation to meet the contemporary and future challenges 3 The impact of environment degradation on biodiversity and conservation in a changing environment 4 Conventional and emerging biotechnological techniques to conserve biodiversity The book is intended for academics scientists and naturalists working in the fields of biology biochemistry biophysics and biomedical sciences *ILRI Annual Project Progress Reports 1997* International Livestock Research Institute, *Sheep Breed Characterization* Tassew Mohammed, 2014-12 Ethiopia is ranked first in livestock population This huge livestock population is promising for the country's future development The sector provided 17% and 50% of the total GDP and Agricultural GDP It has also created many employments But this sector has not yet been fully utilized It needs more attention and this paper will have considerable roles for livestock development Since the country has many agroecology and weather conditions livestock business becomes profitable This study was aimed to generate organized information on physical characteristics selective breeding objectives traits preferences and production system of native sheep types in Habru and Gubalafto districts of North Wollo Zone under smallholders management conditions The sheep types in the study areas were also small in size thus careful cross breeding with other large sized indigenous sheep types should be considered but genetic improvement programmes for the sheep types should be built considering farmer breeding practice production system and trait preference Molecular Characterization of Hamdani Sheep Breed Using SSR Technique Al-Barzinji Yousif M S N, Yousif M. S. N. Al-Barzinji, A. A. Al-Rawi, 2014-07-04 This work was the first work done using molecular technique biotechnology as tools on small ruminant in Kurdistan Region of Iraq to select the animal depended on both genotype phenotype also tried to find correlation between molecular marker SSR with economical traits specially in sheep Identification and characterization of breeds is a must to identify the genetic resources and also to prioritize breeds for conservation and development Genetic variation is the raw material for the animal breeders which is used to mold domestic animal species to people's needs The increasing data on genetics of sheep breeds using different genetic markers will help to understand the evolutionary history of sheep better In addition it will help to refine the definition of breed The objectives of this work Estimate breeding values as BLUP of ewes for some quantitative traits as well

as a genetic economic index as a classic to tool for genetic evaluation and consequently improvement of sheep Molecular characterizations of the Hamdani breed depending on microsatellites DNA markers Define relationships between BLUP of quantitative traits and molecular markers

Livestock Genomics and Community-based Breeding Strategies in Low-and-Middle-Income Countries: Challenges, Opportunities and Future Perspectives Isidore Houaga,Maria Wurzinger,Ntanganedzeni Mapholi,2024-07-17 Low and Middle Income Countries LMICs are home to diverse populations of livestock species adapted to various agro ecological zones production systems and harsh environmental conditions However the livestock in LMICs have not been systematically improved and current low levels of productivity do not meet the demand for livestock products by a growing population Recent advances in next generation sequencing and genotyping technologies have enabled the application of genomic selection in various livestock species in some western countries with great success Despite the low adoption of genomic breeding in LMICs livestock industry various studies and programs were initiated and some are still ongoing Furthermore community based breeding programs CBBP have been initiated in many LMICs with great benefits for smallholder livestock farmers CBBPs are based on the active participation of farmers from inception through to implementation and consider their needs views decisions breeding objectives and available infrastructure In Africa for instance small ruminants CBBPs have generated substantial genetic gains and socioeconomic benefits for rural poor farmers However the current challenges affecting the data recording and genetic evaluation of the CBBPs in LMICS are yet to be fully reported Furthermore the CBBPs are yet to integrate genomic selection in their breeding strategies For sustainable livestock breeding in LMICs there is a need to assess the current status of livestock genomics and community based breeding strategies to identify the challenges and suggest mitigating strategies and future improvement strategy plans

In this Research Topic we aim to collect findings from past and current livestock genomics and community based breeding programs the challenges the lessons learned the opportunities and future perspectives *Bibliography of Agriculture* ,1976

Sustainable Goat Production in Adverse Environments: Volume II João Simões, Carlos Gutiérrez, 2018-01-09 This book covers more than 40 indigenous goat breeds and several ecotypes around the globe and describes genotypic and phenotype traits related to species adaptation to harsh environments and climate change It also addresses sustainable global farming of local goat breeds in different production systems and agro ecosystems Discussing three main global regions Asia Africa and Europe it particularly focuses on adverse environments such as mountain semiarid and arid regions The topic of this highly readable book includes the disciplines of animal physiology breeding sustainable agriculture biodiversity and veterinary science and as such it provides valuable information for academics practitioners and general readers with an interest in those fields *Book of Abstracts of the 73rd Annual Meeting of the European Federation of Animal Science Scientific Committee*, 2023-09-14 This Book of Abstracts is the main publication of the 73rd Annual Meeting of the European Federation of Animal Science EAAP It contains abstracts of the invited papers and contributed presentations of the sessions of EAAP s eleven Commissions Animal Genetics Animal Nutrition Animal Management and Health Animal Physiology Cattle Production Sheep and Goat Production Pig Production Horse Production and Livestock Farming Systems Insects and Precision Livestock Farming *Management of Agricultural, Forestry, Fisheries and Rural Enterprise - Volume I* Robert J.
