NIOSH, Manual of Analytical Methods, 1994 **NIOSH Manual of Analytical Methods: Method finder, user's guide, methods A-D**, 1994 **Arsenic Research and Global Sustainability** Prosun Bhattacharya, Marie Vahter, Jerker Jarsjö, Jurate Kumpiene, Arslan Ahmad, Charlotte Sparrenbom, Gunnar Jacks, Marinus Eric Donselaar, Jochen Bundschuh, Ravi Naidu, 2016-06-08 The Congress Arsenic in the Environment offers an international multi and interdisciplinary discussion platform for research and innovation aimed towards a holistic solution to the problem posed by the environmental toxin arsenic with considerable societal impact The congress has focused on cutting edge and breakthrough research in physical chemical toxicological medical agricultural and other specific issues on arsenic across a broader environmental realm The Congress Arsenic in the Environment was first organized in Mexico City As2006 followed by As2008 in Valencia Spain As2010 in Tainan Taiwan As2012 in Cairns Australia and As2014 in Buenos Aires Argentina The

6th International Congress As2016 was held June 19-23, 2016 in Stockholm Sweden and was entitled Arsenic Research and Global Sustainability. The Congress addressed the broader context of arsenic research along the following themes: Theme 1 Arsenic in Environmental Matrices and Interactions (Air, Water, Soil and Biological Matrices); Theme 2 Arsenic in Food Chain; Theme 3 Arsenic and Health; Theme 4 Clean Water Technology for Control of Arsenic; Theme 5 Societal issues, Policy Studies, Mitigation and Management. Long-term exposure to low to medium levels of arsenic via contaminated food and drinking water can have a serious impact on human health and globally more than 100 million people are at risk. Since the end of the 20th century, arsenic in drinking water (mainly groundwater) has emerged as a global health concern. In the past decade, the presence of arsenic in plant foods, especially rice, has gained increasing attention. In the Nordic countries, in particular, the use of water-soluble inorganic arsenic chemicals, e.g. chromated copper arsenate (CCA) as wood preservatives and the mining of sulfidic ores have been flagged as health concerns. The issue has been accentuated by discoveries of naturally occurring arsenic in groundwater, primarily in the private wells in parts of the Fennoscandian Shield and in sedimentary formations with potentially detrimental effects on public health. Sweden has been at the forefront of research on the health effects of arsenic, technological solutions for arsenic removal, and sustainable mitigation measures for developing countries. Hosting this Congress in Sweden was also relevant because historically Sweden has been one of the leading producers of As_2O_3 and its emission from the smelting industries in northern Sweden and has successfully implemented actions to reduce the industrial emissions of arsenic as well as minimizing the use of materials and products containing arsenic since 1977. The Congress has gathered professionals involved in different segments of interdisciplinary research in an open forum and strengthened relations between academia, industry, research laboratories, government agencies, and the private sector to share an optimal atmosphere for exchange of knowledge, discoveries, and discussions about the problem of arsenic in the environment and catalyze the knowledge generation and innovations at a policy context to achieve the goals for post-2015 Sustainable Development.
