Mathematics Dr Yeap Ban Har,2009-01-01 In an increasingly technological world mathematics curricula around the world have responded accordingly Tedious computation which is efficiently and accurately done using a simple calculator as well as more powerful software programmes can no longer be the focus of any mathematics curriculum In Singapore the curriculum was recently revised to focus on the development and improvement of students intellectual competence Singapore Ministry of Education 2006 The ability to visualize and to look for connections are given more emphasis than the ability to do tedious computation Research in the use of calculators in mathematics teaching and learning has generally concentrated on two areas First there have been metaanalyses of the effects of calculator use on student achievement Second there are several studies on teachers beliefs on calculator use in the classroom The metaanalyses of the effects of calculator use have found that there were improvements in computational conceptual and problem solving skills as well as in attitudes towards mathematics Ellington 2003 Hembree Dessart 1992 A study on instructional leaders showed that the majority of them agree with the research findings Yeo 2008 A study on practising teachers found that a majority of them did not believe that calculator use lowers students achievement Carter Ferrucci Yeap 2008 In a press release to explain the move to introduce

the use of calculators in examination in upper primary levels it was announced that calculator use can facilitate exploration to discover patterns and to make generalizations as well as make the use of authentic data possible Singapore Ministry of Education 2007 Without calculator use the repetitive computations needed for students to discover patterns make this important aspect of mathematics learning tedious Authentic data often involve numbers which may be difficult for students to deal with without calculators

Mathematical Applications and Modelling Berinderjeet Kaur, 2010 Mathematical Applications and Modelling is the second in the series of the yearbooks of the Association of Mathematics Educators in Singapore The book is unique as it addresses a focused theme on mathematics education The objective is to

illustrate the diversity within the theme and present research that translates into classroom pedagogies **Teacher Professional Learning** Shu-Shing Lee, Bee Leng Chua, Alexius Chia, Monica Woei Ling Ong, Pamela Costes-Onishi, 2025-05-29 This book provides an insider's perspective of the Singapore education system that views teacher capacity building as a key lever for quality educational experiences. It describes experiences from policy conceptualisation to practice implementations of teacher learning. This book includes international perspectives in the form of expert commentaries and critique where comparisons are made between Singapore's experiences and those of other education systems. It also describes the complexities of teacher professional learning within and across three levels: policies, partnerships, and schools that shape policy to practice implementations of teacher professional learning from pre-service to in-service teachers. Together with the international scholars, this book shares the lessons learnt in Singapore to encourage policy makers, scholars, and schools to continue thinking about how teacher professional learning can be enhanced, caution against the direct transfer of practices, and describe how teacher capacity building lays the foundation for the education system to stay relevant, address challenges, and meet students' needs. *Forthcoming Books* Rose Arny, 1997 **Singapore Math and Science Education Innovation** Oon Seng Tan, Ee Ling Low, Eng Guan Tay, Yaw Kai Yan, 2021-08-04 This edited volume explores key areas of interests in Singapore math and science education including issues on teacher education, pedagogy, curriculum, assessment, teaching practices, applied learning, ecology of learning, talent grooming, culture of science and math, vocational education, and STEM. It presents to policymakers and educators a clear picture of the education scene in Singapore and insights into the role of math and science education in helping the country excel beyond international studies such as PISA, the pedagogical and curricular advancements in math and science learning, and the research and practices that give Singaporean students the competitive edge in facing the uncertain and challenging landscape of the future. On the Power of Fuzzy Markup Language Giovanni Acampora, Vincenzo Loia, Chang-Shing Lee, Mei-Hui Wang, 2012-12-14 One of the most successful methodology that arose from the worldwide diffusion of Fuzzy Logic is Fuzzy Control. After the first attempts dated in the seventies, this methodology has been widely exploited for controlling many industrial components and systems. At the same time, and very independently from Fuzzy Logic or Fuzzy Control, the birth of the Web has impacted upon almost all aspects of computing discipline. Evolution of Web Web 2.0 and Web 3.0 has been making scenarios of ubiquitous computing much more feasible; consequently, information technology has been thoroughly integrated into everyday objects and activities. What happens when Fuzzy Logic meets Web technology? Interesting results might come out as you will discover in this book. Fuzzy Markup Language is a son of this synergistic view where some technological issues of Web are re-interpreted taking into account the transparent notion of Fuzzy Control as discussed here. The concept of a Fuzzy Control that is conceived and modeled in terms of a native web wisdom represents another step towards the last picture of Pervasive Web Intelligence. Toh, Azilawati Jamaludin, Longkai Wu, 2019-08-07 This book offers an ecological perspective to understand the opportunities and complexities of spreading and sustaining educational innovations It explores the imperatives underpinning educational reforms and identifies the role of schools in developing disseminating and sustaining changes in Singapore's educational context It also includes international case studies that examine the dialectical relationships between structure people and culture and demonstrate that cultivating ecologies involves leveraging affordances and resources across the education system to create new contexts synergies and capacities Further it argues that educational innovations and reforms also need to consider tacit knowledge and conditions of transfer which may be ambiguous and challenging Few books address the nuances and interactions of innovation and change across levels of the education ecology from the micro classroom meso organisation school exo partners macro policy and chrono time scales levels The ecological perspective adopted in this book explores the dynamic tensions in order to understand the interplays of policy and school level influences that contextualize school innovations By presenting multiple voices and views it allows impediments and affordances of innovation diffusion to be discussed holistically which is an integral caveat for nurturing a sustainable ecology that enables innovations
