

ASTROPHOTOGRAPHY

Capturing the night sky for posterity is a gripping passion and thanks to digital technology it's one that has never been easier. That said, it still poses a challenge. The days of wet processing may be long gone, but now there are new camera functions to uncover and much to consider when creating an imaging setup. To make things easier, we've split the astrophotography section

of this special edition into chapters. We begin with nightscapes – images that are similar to the views of the constellations and the Milky Way that you would see with the naked eye. From there we head out into the Solar System, to the Moon, the Sun and the planets, and finally beyond the influence of our star and into the realm of deep-sky objects, such as globular clusters and nebulae. In each

part, we'll outline all your equipment options – what works, what doesn't, what the bare minimum is and what an ideal setup would be – and explain how to use it in the most effective way. For a quick preview, check out the table below to find out what you can expect to capture with your camera. Once you've mastered the art of the capture, you'll be ready to delve into part two: image processing!

WHAT CAN I CAPTURE WITH MY CAMERA?

Camera type	Viable targets
Smartphone	Daylight phenomena and bright twilight scenes; afocal shots of the Moon and bright planets through a telescope; the latest models can now even take basic constellation images.
Compact	Daylight phenomena and bright twilight scenes; afocal shots of the Moon and bright planets through a telescope; the latest models can now even take basic constellation images.
Prosumer	Daylight phenomena, twilight scenes and some basic night scenes; afocal shots of the Moon and planets; some have limited deep-sky capability for pictures of galaxies, nebulae and star clusters.
DSLR/Mirrorless interchangeable lens	All daylight phenomena and night scenes; the Moon through a long lens or attached to a telescope; one-shot-colour deep-sky imaging; basic planetary capability.
High frame rate	Optimally suited for Moon, Sun and planets through a telescope; some have basic to intermediate deep-sky capability.
Cooled astronomical CCD	Optimally suited for long-exposure deep-sky imaging; capable of imaging the Moon and Sun; basic planetary capability, but good for picking out faint moons.

Sky At Night Complete Guide To Astrophotography

David Dickinson

Sky At Night Complete Guide To Astrophotography:

The Complete Guide to Landscape Astrophotography Michael Shaw, 2017-03-15 The Complete Guide to Landscape Astrophotography is the ultimate manual for anyone looking to create spectacular landscape astrophotography images By explaining the science of landscape astrophotography in clear and straightforward language it provides insights into phenomena such as the appearance or absence of the Milky Way the moon and constellations This unique approach which combines the underlying scientific principles of astronomy with those of photography will help deepen your understanding and give you the tools you need to fulfil your artistic vision Key features include Distinguished Guest Gallery of images from renowned nightscape photographers such as Babak Tafreshi Bryan Peterson Alan Dyer Brenda Tharp Royce Bair Wally Pacholka and David Kingham The twenty five best landscape astrophotography subjects and how to photograph them Astronomy 101 build your knowledge of night sky objects and their motion the Milky Way moon Aurora Borealis Australis constellations meteors and comets Information on state of the art planning software and apps designed to enable you to capture and enhance your landscape astrophotography Field guide for creating a detailed plan for your night shoot Description of the best moon phases for specific types of nightscape images and the best months and times of night to see the Milky Way How to guide for creating stunning time lapse videos of the night sky including Holy Grail transitions from pre sunset to complete darkness Four detailed case studies on creating landscape astrophotography images of the Milky Way full moon star trails and constellations
