

## **Volvo excavator fault codes list**

The operation failure of the excavator is unavoidable when it is process of using. What do the drivers who do not understand the fault code encounter the operation failure of the excavator? Most of them choose to ask for a professional maintenance master. However, finding a professional maintenance technician is a waste of time and expense. There are two reasons for this: First, we must contact the maintenance master. The maintenance master is not going to follow us on the construction site anytime and anywhere. This process is time consuming. Second, even a professional maintenance technician may not be able to find the cause of the failure based on entirely experience. In this way, the money to ask maintenance master is also wasted. Therefore, understanding the meaning of the error code plays a key role in solving the fault problem in the operation or maintenance of the excavator. This article will introduce the conversion of the SAE fault code to the Volvo excavator fault code, the Volvo EC140CL fault code and the Volvo EC210B fault code etc. Details as follows:

Machine serial number:

EC330B 10236

EC360B 10829

The maintenance tool VCADS Pro uses a SAE type of fault code. The design of the SAE fault code includes identification numbers such as MID, PID and FMI.

**MID:** Message Identification Deion (indicating control component identification). Each control component has a unique number.

**PID:** Parameter Identification Deion (represents the identification of parameters/values). Each parameter has a unique number.

**PPID:** Proprietary Parameter I dentification Deion (represents Volvo unique parameter value / identification). Each parameter has a Volvo unique number.

**SID:** Subsystem Identification Deion (represents component identification). The SID numbers are determined by which control component (MID) they are transmitted from. Each control component has its own sequence of SID numbers. The exceptions are the SID numbers 151-255, which are common to all systems.

**PSID:** Proprietary Subsystem I dentification Deion. (Indicating Volvo unique component identification).

**FMI:** Failure Mode I dentifier (indicating the type of fault identified).

The troubleshooting information is based on the fault code of the Volvo excavator. When reading the fault code on VCADS Pro, the SAE fault code must be converted to a Volvo excavator fault code for further troubleshooting. The following is a conversion table for the SAE fault code to the Volvo excavator fault code.
