life Given the emergence of new vehicles with more stringent performance characteristics engine vibration isolation has
become a more demanding issue This thesis focuses on the modelling development and experimental analysis of two active
and semi active engine mounts designed specifically to address the isolation problem of Variable Displacement Engines VDE
It has been shown however that the designed mounts are flexible enough to fulfil the isolation requirements of other engine
types as well Both proposed mounts are made by adding retrofitable parts to the conventionally available hydraulic engine

consumption makes them appealing solutions for the auto industry *Volvo Penta* (Seloc) Seloc,2008 This manual covers
