

Sherlock Bones: Results and Analysis

Remains Set #_____

Team Members:_____

Pre – Lab Exercise

List at least 4 skeletal traits that you believe could be used to help identify an individual.

- a.
- b.
- c.
- d.

Final Determinations*

**Remember that all of the bones used to assess any given trait should be look at as a whole. For example, if the majority of the bones used to determine the sex indicate that the individual was male, then your final determination of sex should be male.*

1. Based on your results entered in Tables 1-4, make a final determination as to the sex of this individual. Write this answer in the space provided below Table 4.
2. Based on your results entered in Table 5 and the results of the femur curvature test (below Table 3), make a final determination as to the race of this individual. Write this answer in the space provided at the bottom of page **S18**.
3. Now that you have determined the sex and race of this individual, you can now determine the height by following the steps below:
 - A. **FOR THE FEMUR:** In the space provided just above Table 6 for the Femur, convert the data for the maximum length of the femur (MLF) from millimeters (mm) to centimeters (cm). In Table 6, locate the regression formula that corresponds to the sex and race of the skeleton as you have determined the bones to be. Insert the converted (MLF) into this formula and calculate. Record the height in centimeters to the right of this formula. Using the corresponding confidence interval to calculate the height range based on the femur only and record in Table 6.

FOR THE TIBIA: Follow the above step but use Table 6 for the Tibia and the regression formula and confidence interval that are in Table 6 for the Tibia.
 - B. Repeat the above step for the maximum length of the humerus (MLH) to complete Table 7 and determine the height range based on the humerus only.
 - C. To determine the probable height range of this individual based on the femur (or tibia) and humerus, refer to the appropriate Tables 6 & 7 and record the minimum value and the maximum value of the calculated height ranges in the space provided below Table 7. Convert each value to feet and inches by following the instructions provided below Table 7.
4. Based on the ages circled in Tables 8, 9, and 10, determine the minimum age of this individual at the time of death. Write this answer in the space provided below Table 10.
5. Report your final conclusion to your instructor.
