Shift Report For Nurses:

Nursing bedside shift report Heather Gleason, 2014 For healthcare organizations patient safety and satisfaction are major priorities and are impacted by many different professional disciplines Nurses can influence this greatly through the relationships built with patients and the information provided to them regarding care while in the hospital Communication errors are the leading cause of sentinel events for patients reiterating the importance of having a safe transfer of care between nurses at shift change Bedside shift report not only creates transparency of patient information but results in improved patient safety and hospital satisfaction scores Completing nursing shift report at the bedside promotes patients and families contribution to reporting discussion and optimizes patient safety through a nurse's visualization of a patient's condition Watson's Caring Theory and the concept of relationship building provide the framework for implementing bedside shift report A conceptual metaphor integrating caring intentionality and relationships into bedside shift report as well as patient and staff responses provides a visual for the goals of the bedside shift report as well as patient and staff responses provides a visual for the goals of the bedside shift report implementation The use of a standardized reporting tool into bedside shift report will be evaluated through patient and staff surveys Nurses who implement bedside shift report into their practice will produce positive patient outcomes while demonstrating greater commitment to the caring acts that encompass nursing practice

Standardizing the Bedside Shift Report: Improving Communications and Promoting Patient Safety Chona C. Alforque, 2020 **PROBLEM** Nursing shift reports are integral to nursing as they allow for the transfer of critical information and responsibility of patient care from one nurse to another Ineffective communication during shift to shift reports can contribute to gaps in patient care and breaches in patient safety including medication errors falls and sentinel events The greatest risk of communication breakdown is during transitions in care **CONTEXT** St Louise Regional Hospital a small community hospital consisting of an eight bed medical surgical intensive care unit lacked structure in how handoff should occur and had variances in shift handoffs Observation of the shift handoff at the nurses station revealed many communication gaps that have shown negative impacts on patient safety and outcomes The improvement project described in this paper focused on evidence based practices that support the benefits of bedside shift and implementations of standardized handoff tools **INTERVENTION** Intervention included an education in service for unit managers educational coordinators and staff nurses to emphasize the important benefits of bedside shift report **MEASURES** The three components for evaluating improvement include outcome process and balancing measures to determine whether the improvement project has had the desired impact The outcome measure expected to yield the following direct observation of nurses during bedside report to calculate how often is being done monitor for decrease in overtime due to more efficient shift to shift bedside reports and a review of risk management reports observing for effect on the number and severity of medication errors **RESULTS** The outcome measure is to increase the nurses compliance with bedside shift report in the intensive care unit to at

least 80% within six months of implementation

CONCLUSION With the proposed change bedside shift report will address all the safety hazards by reducing adverse events such as medical errors patient falls at shift change and sentinel events. Bedside shift report improves patient safety, enhances the quality of care, improves patient and nurse satisfaction, decreases unnecessary healthcare expenditure, and saves time.

Standardizing the Bedside Shift Report: Improving Nurse-to-nurse Communication Deepi Sahota, 2020. **PROBLEM** The Community Living Center (CLC) reveals an immense concern on shift-to-shift handoff report. Shift-to-shift report is done in the report room; often, times unclear information is given, and critical information is not appropriately conveyed.

CONTEXT The project was implemented on a 50-bed unit at the Veterans Affairs. The improvement project was focused on collaborative partnerships, standardized bedside shift report, and utilization of the SBAR tool in the prevention of communication errors.

INTERVENTIONS The SBAR tool was utilized to provide a framework for effective communication between nurses. The CNL facilitated an hour in service on bedside shift report to nurses with a mix of PowerPoint slides, video, and practice exercises using strategies from

TeamSTEPPS MEASURES The outcome measure for this project was defined as the number of handoffs performed on the CLC2 unit per month The improvement goal is to achieve an 80% compliance rate **RESULTS** The metrics show significant improvement in bedside shift report compliance from 78% to 83% in April 2020 and sustained through June 2020 37 5% of nurses strongly agreed with the information given in the report is relevant to the care of their patients **CONCLUSION** Bedside shift report was successful by reducing miscommunication errors increased nurse satisfaction and maintaining compliance The collaboration of the leadership team and frontline nurses was the key to success **Nurse Retention**
