Introduction to Optimum Design Jasbir Singh Arora,2016-04-05 Introduction to Optimum Design Fourth Edition carries on the tradition of the most widely used textbook in engineering optimization and optimum design courses It is intended for use in a first course on engineering design and optimization at the undergraduate or graduate level in engineering departments of all disciplines with a primary focus on mechanical aerospace and civil engineering courses Through a basic and organized approach the text describes engineering design optimization in a rigorous yet simplified manner illustrates various concepts and procedures with simple examples and

demonstrates their applicability to engineering design problems Formulation of a design problem as an optimization problem is emphasized and illustrated throughout the text using Excel and MATLAB as learning and teaching aids This fourth edition has been reorganized rewritten in parts and enhanced with new material making the book even more appealing to instructors regardless of course level Includes basic concepts of optimality conditions and numerical methods that are described with simple and practical examples making the material highly teachable and learnable Presents applications of optimization methods for structural mechanical aerospace and industrial engineering problems Provides practical design examples that introduce students to the use of optimization methods early in the book Contains chapter on several advanced optimum design topics that serve the needs of instructors who teach more advanced courses Optical Sensors for Structural Health Monitoring Paulo Antunes,Humberto Varum,2021-03-12 The evolution and need for the preservation and maintenance of existing structures recent or historical has fostered research in the area of structural monitoring translated into the development of new techniques equipment and sensors Early detection of damage and accurate assessment of structural safety requires monitoring systems the data from which can be used to calibrate numerical models for structural analysis and to assess safety Data are obtained under real time conditions considering a group of parameters related to structural properties such as stresses accelerations deformations and displacements The analysis of structural properties is particularly relevant when the structure is subjected to extreme events earthquakes wind fire and explosions among others or repeated loads road rail air traffic vibrations induced by equipment and machines since they affect the structural integrity and put the users at risk In order to prevent the severe damage and eventual collapse of structures and consequent human material and economic losses the implementation of monitoring systems becomes a valuable tool for today s society Monitoring of structures is becoming increasingly important not only as preventive action but also due to actual economic and sustainability concerns to ensure a safer and more comfortable built environment Catalog of Copyright Entries.
