to support the achievement of declared national and global conservation and sustainability goals. Nonetheless, the extent to which all these initiatives can provide lasting positive effects on conservation and restoration targets is often impaired, limited by the lack of robust baseline data and systematic monitoring, which in turn are constrained by the limited number of long-term monitoring programs and limited dedicated funding. This collection underlines the importance of monitoring in times of global change and shifting baselines and the urgency of boosting conservation strategies to ensure progression towards meeting global conservation objectives. Emphasis is given also to the socio-ecological contexts and dimensions of conservation efforts and the potential of societal engagement in monitoring practices, a key enabling factor to turn conservation initiatives into practical actions and ecosystem protection.

Psychiatry and Neuroscience Update Pascual Ángel Gargiulo, Humberto Luis Mesones Arroyo, 2021-01-23. This broad and thought-provoking volume provides an overview of recent intellectual and scientific advances that intersect psychiatry and neuroscience, offering a wide range of penetrating insights in both disciplines. The fourth volume on the topic in the last several years from a varying panel of international experts identifies the borders, trends, and implications in both fields today and goes beyond that into related disciplines to seek out connections and influences. Similar to its three Update book predecessors, *Psychiatry and Neuroscience Volume IV* presents a range of interesting topics in the main disciplines, psychiatry and neuroscience, and attempts to provide deeper comprehension or explication of the normal and diseased human mind, its biological correlates, and its biographical and existential implications. This engaging volume continues the previous style of exploring different disciplines and trying to integrate disciplinary evidence from varying points of view in an organic manner. The first section is about epistemological considerations regarding the study of normal and abnormal human behaviors, including for example the topic of phenomenological psychopathology and phenomenological psychiatry in relation to schizophrenia and substance misuse, among other topics. Section 2 addresses issues around the translation of basic neuroscience to expression in the human brain and behavioral implications. Section 3 discusses the issues of learning, teaching, and the role of social environment in the field of neuroscience. Finally, section 4 reviews various perspectives on explaining human pathological behaviors from brain disorders to psychopathology.
