Transactions on Rough Sets IV James F. Peters, 2005-11-15 Volume IV of the Transactions on Rough Sets TRS introduces a number of new advances in the theory and application of rough sets. Rough sets and approximations spaces were introduced more than 30 years ago by Zdzisław Pawlak. These advances have profound implications in a number of research areas such as the foundations of rough sets, approximate reasoning, artificial intelligence, bioinformatics, computational intelligence, cognitive science, intelligent systems, data mining, machine intelligence, and security. In addition, it is evident from the papers included in this volume that the foundations and applications of rough sets is a very active research area worldwide. A total of 16 researchers from 7 countries are represented in this volume, namely Canada, India, Norway, Sweden, Poland, Russia, and the United States of America. Evidence of the vigor, breadth, and depth of research in the theory and applications of rough sets can be found in the 10 articles in this volume. Prof. Pawlak has contributed a treatise on the philosophical underpinnings of rough sets. In this treatise, observations are made about the Cantor notion of a set, antinomies arising from Cantor sets, the problem of vagueness, especially vague/imprecise concepts, fuzzy sets, rough sets, fuzzy vs. rough sets, as well as logic and rough sets. Among the many vistas and research directions suggested by Prof. Pawlak, one of the most fruitful concerns the model for a rough membership function, which was incarnated in many different forms since its introduction by Pawlak and Skowron in 1994. Recall here that Prof. Supervised and Unsupervised Ensemble Methods and their Applications Oleg Okun, 2008-04-18. This book results from the workshop on Supervised and Unsupervised Ensemble Methods and their Applications, briefly SUEMA, in June 2007 in Girona, Spain. This workshop was held alongside the 3rd Iberian Conference on Pattern Recognition and Image Analysis. *Information Retrieval Technology* Pu-Jen Cheng, Min-Yen Kan, Wai Lam, Preslav Nakov, 2010-12-06. The Asia Information Retrieval Societies Conference AIRS 2010 was the sixth conference in the AIRS series, aiming to bring together international researchers and developers to exchange new ideas and the latest results in information retrieval. The scope of the conference encompassed the theory and practice of all aspects of information retrieval in text, audio, image, video, and multimedia data. AIRS 2010 continued the conference series that grew from the Information Retrieval with Asian Languages IRAL workshop series, started in 1996. It has become a mature venue for information retrieval, working in support from the ACM Special Interest Group on Information Retrieval (SIGIR), the Association for Computational Linguistics and Chinese Language Processing (ACLCLP), ROCLING, and the Information Processing Society of Japan Special Interest Group on Information Fundamentals and Access Technologies (IPSJSIG-IFAT). This year saw a sharp rise in the number of submissions over the previous year. A total of 120 papers were submitted, representing work by academics and practitioners not only from Asia but also from Australia, Europe, North America, etc. The high quality of the work made it difficult for the dedicated program committee to decide which papers to feature at the conference. Through a double-blind reviewing process, 26 submissions (21%) were accepted as full oral papers, and 31 (25%) were accepted as short posters. The

success of this conference was only possible with the support of all of the authors who submitted papers for review the
 programme committee members who constructively assessed the submissions and the registered conference delegates We thank
 them for their support of this conference and for their long term support of this Asian centric venue for IR research and

 Dams, 2009-11-04 The 16th International Symposium on Formal Methods marked the 10th anniversary of the First
 World Congress on Formal Methods that was held in 1999 in Toulouse France We wished to celebrate this by advertising and
 organizing FM 2009 as the Second World Congress in the FM series aiming to once again bring together the formal methods
 communities from all over the world The statistics displayed in the table on the next page include the number of countries
 represented by the Programme Committee members as well as of the authors of submitted and accepted papers Novel this
 year was a special track on tools and industrial applications Submissions of papers on these topics were especially encouraged
 but not given any special treatment It was just as hard to get a special track paper accepted as any other paper What we did
 promote however was a discussion of how originality contribution and soundness should be judged for these papers The
 following questions were used by our Programme Committee Artificial Intelligence Research and Development Beatriz
 López, 2005 The field covered by Artificial Intelligence AI is multiform and gathers subjects as various as the engineering of
 knowledge the automatic treatment of the language the training and the systems multiagents and more This book focuses on
 subjects including Machine Learning Reasoning Neural Networks Computer Vision and Multiagent Systems *Machine*
