Universities, Sustainability and Society: Supporting the Implementation of the Sustainable Development Goals Walter Leal Filho, Amanda Lange Salvia, Luciana Brandli, Ulisses M. Azeiteiro, Rudi Pretorius, 2021-05-03 In order to yield the expected benefits sustainability initiatives need to be undertaken by means of a close cooperation between universities on the one hand and societal partners on the others The principle of co creation and co execution of sustainability initiatives increases the value for all by mutual learning and the sharing of expertise and resources But pursuing sustainability initiatives with a community and societal involvement is not simple There is a perceived need for a better understanding of how universities can interact with society in order to support the implementation of the UN Sustainable Development Goals This book is an attempt to address this need by a novel approach which focuses on current potentials and challenges across a wide range of fields and expertise The book focuses on how the theory and practice of sustainable development interact and shows the need for a continuation of the dialogue among sustainability academics and practitioners so as to address the issues matters and problems at hand The spectrum of themes addressed on this book also entails how environmental values and ethics are applied and the relationship between social biological and cultural diversity It also includes a broad disciplinary approach to sustainability including education research and case studies and the links with human environment relations in a sustainable development context

Modelling and Applications in Mathematics Education Peter L. Galbraith, Hans-Wolfgang Henn, Mogens Niss, 2007-12-05 Among the themes that have been central to mathematics education

during the last 30 years are those of mathematical modelling and applications of mathematics to extra mathematical fields. More generally we refer to these as relations between mathematics and the extra mathematical world, some times also called the real world or preferably according to Henry Poincaré the rest of the world. That applications and modelling have been important themes in mathematics education can be inferred from the wealth of literature on these topics including material generated from a multitude of national and international conferences. In particular let us mention firstly the ICMEs the International Congresses on Mathematical Education with their regular working or topic groups and lectures on applications and modelling and secondly the series of ICTMAs the International Conferences on the Teaching of Mathematical Modelling and Applications which have been held biennially since 1983. Their Proceedings and Survey Lectures have addressed the state of the art at the relevant time and contain many examples, studies, conceptual contributions and resources involving relations between the real world and mathematics for all levels of the educational system. In curricula and textbooks we find today many more references to real world phenomena and problems than say twenty years ago.

Modern Research and Studies in Educational Sciences IV Abdülkadir KABADAYI, 2025-07-11

Researching Catholic Education Sean Whittle, 2018-01-25. This book presents a range of perspectives on the current state of Catholic education in the opening decades of the twenty first century. All of the chapters have their origin in an International Conference on Catholic Education held at Heythrop College, University of London in September 2016. The book brings together many leading scholars to present a survey of the latest research on Catholic education in areas such as the aims of Catholic education, Catholic schools and Catholic identity, leadership issues in Catholic schools and fresh thinking about the place of Religious Education (RE) in Catholic Education. This book demonstrates how the field of Catholic Education Studies has firmly come of age. Rather than being a subfield of educational or theological discourse it is now an established field of research and study. As such the book invites readers to engage with much of the new thinking on Catholic education that has grown rapidly in recent years. It offers a broad range of contemporary perspectives on research in Catholic Education and rich insights into current thinking about Catholic Education.
