The Myths of Measurement and Meritocracy J. M.

Beach, 2021-09-15 This book examines the idea of educational accountability in higher education which has become a new secular gospel But do accountability policies actually make colleges better What if educational accountability tools don't actually measure what they're supposed to What if accountability data isn't valid or worse what if it's meaningless What if administrators don't know how to use accountability tools or correctly analyze the problematic data these tools produce What if we can't measure let alone accurately assess what matters most with teaching or student learning What if students don't learn much in college What if higher education was never designed to produce student learning What if college doesn't help most students either personally or economically What if higher education isn't meritocratic actually exacerbates inequality and makes the lives of disadvantaged students even worse This book will answer these questions with a wide

interdisciplinary range of the latest scientific research

Conversations About Job Performance Michael E.

Gordon, Vernon D. Miller, 2012-01-11 *Conversations About Job Performance* details the Communication Centered Approach

CCA to performance appraisal that is focused on its most challenging part the appraisal interview For many years

researchers and practitioners have devoted substantial time and effort to develop satisfactory performance appraisal systems

that impart useful information to employees about their job performance. Nonetheless, problems continue to arise principally because managers often find it difficult to provide feedback on performance to their employees. If this sounds familiar to you, you'll need this book which details the Communication Centered Approach (CCA) to performance appraisal that is focused on its most challenging part: the appraisal interview. The CCA described by authors Gordon and Miller is important because, despite the continuing evolution of performance appraisal, a conversation about the employee's performance is still a very important component of the latest systems. Also, focusing on communication offers a valuable perspective on all aspects of performance appraisal: the definition of performance and its various facets; how performance information is given and perceived; and the interactional context that affects the meaning of feedback. Thoughtful insight and communication literature that is the basis for each of these ideas is included, as well as illustrations on how the conceptual foundation may be translated into practice.

Can We Measure What Matters Most? J. M. Beach, 2021-09-30. This book examines the idea of educational accountability, which has become a new secular gospel. But do accountability policies actually make schools better? Do business management theories and practices make organizations more effective? What if the most widely used management theories and assessment tools don't work? What if educational accountability tools don't actually measure what they're supposed to? What if accountability data isn't valid or worse, what if it's meaningless? What if administrators don't know how to use accountability tools or correctly analyze the problematic data these tools produce? What if we can't measure, let alone accurately assess, what matters most with teaching or student learning? How is a business model of economic efficiency supposed to increase the competing and perhaps mutually exclusive ends of schooling, such as human development, student learning, personal satisfaction, social mobility, and economic growth? What if students don't learn much in schools? What if schools were never designed to produce student learning? This book will answer these questions with a wide interdisciplinary range of the latest scientific research.
