In this wonderfully accessible yet sophisticated
work, complete with diagrams and diagrams,
British architect and critic Paul Shepherd
draws a boundary around the subject of archi-
tecture, describing its place in art and technol-
ogy, its place in history, and its place in our lives
now. It is here where it is a pleasure to say
that architecture is everything—these philoso-
phy is closer to art is theory—Shepherd
boldly and convincingly argues for the subject,
so that we may talk about architecture for what
it is.

The Projective Cast Architecture And Its Three Geometries

Robert McCarter

The Projective Cast Architecture And Its Three Geometries:

The Projective Cast Robin Evans, 2000-08-25 Robin Evans recasts the idea of the relationship between geometry and architecture drawing on mathematics engineering art history and aesthetics to uncover processes in the imagining and realizing of architectural form Anyone reviewing the history of architectural theory Robin Evans observes would have to conclude that architects do not produce geometry but rather consume it In this long awaited book completed shortly before its author's death Evans recasts the idea of the relationship between geometry and architecture drawing on mathematics engineering art history and aesthetics to uncover processes in the imagining and realizing of architectural form He shows that geometry does not always play a stolid and dormant role but in fact may be an active agent in the links between thinking and imagination imagination and drawing drawing and building He suggests a theory of architecture that is based on the many transactions between architecture and geometry as evidenced in individual buildings largely in Europe from the fifteenth to the twentieth century From the Henry VII chapel at Westminster Abbey to Le Corbusier's Ronchamp from Raphael's S Eligio and the work of Piero della Francesca and Philibert Delorme to Guarino Guarini and the painters of cubism Evans explores the geometries involved asking whether they are in fact the stable underpinnings of the creative intuitive or rhetorical aspects of architecture In particular he concentrates on the history of architectural projection the geometry of vision that has become an internalized and pervasive pictorial method of construction and that until now has played only a small part in the development of architectural theory Evans describes the ambivalent role that pictures play in architecture and urges resistance to the idea that pictures provide all that architects need suggesting that there is much more within the scope of the architect's vision of a project than what can be drawn He defines the different fields of projective transmission that concern architecture and investigates the ambiguities of projection and the interaction of imagination with projection and its metaphors

Sound Worlds from the Body to the City Ariane Wilson, 2019-03-13 This volume reveals the extent to which aural perception influences our spatial awareness Spanning various fields and practices from psychology to geography and from zoology to urban planning it covers a range of environments in which sounds contribute to forming our sense of space and place The contributions gathered here lead from the mother's womb through the habitats of insects and owls to the resonating bodies of buildings and the city to artistic endeavours that aim to consciously reveal the spatiality of sound In this progression the book demonstrates the profoundly constitutive role of hearing and listening at all stages of our biological and social development as well as the epistemological phenomenological and emotional importance of sound in relation to our construction of space As such it will appeal not only to architects town planners and artists but also to the growing

community of scientists and scholars intrigued by sonic issues Differing from both quantitative acoustics and sound design its approach opens new perspectives on the sonic dimension and aural understanding of our environment by tracing analogies between a diversity of spaces formed when sound interacts with listening as a mode of attention **Analysing**

Aesthetic Science Alexander Wragge-Morley,2020-04-20 The scientists affiliated with the early Royal Society of London have long been regarded as forerunners of modern empiricism rejecting the symbolic and moral goals of Renaissance natural history in favor of plainly representing the world as it really was In *Aesthetic Science* Alexander Wragge Morley challenges this interpretation by arguing that key figures such as John Ray Robert Boyle Nehemiah Grew Robert Hooke and Thomas Willis saw the study of nature as an aesthetic project To show how early modern naturalists conceived of the interplay

between sensory experience and the production of knowledge Aesthetic Science explores natural historical and anatomical works of the Royal Society through the lens of the aesthetic By underscoring the importance of subjective experience to the communication of knowledge about nature Wragge Morley offers a groundbreaking reconsideration of scientific representation in the early modern period and brings to light the hitherto overlooked role of aesthetic experience in the history of the empirical sciences

The Space Within Robert McCarter,2016-11-15 Alvar Aalto once argued that what mattered in architecture wasn't what a building looks like on the day it opens but what it is like to live inside it thirty years later In this book architect and critic Robert McCarter persuasively argues that interior spatial experience is the necessary starting point for design and the quality of that experience is the only appropriate means of evaluating a work after it has been built McCarter reveals that we can't really know a piece of architecture without inhabiting its spaces and we need to counter our contemporary obsession with exterior views and forms with a renewed appreciation for interiors He explores how interior space has been integral to the development of modern architecture from the late 1800s to today and he examines how architects have engaged interior space and its experiences in their design processes fundamentally transforming traditional approaches to composition Eloquently placing us within a host of interior spaces he opens up new ways of thinking about architecture and what its goals are and should be

The Inhabitable Flesh of Architecture Marcos

Cruz,2017-03-02 Today's architecture has failed the body with its long heritage of purity of form and aesthetic of cleanliness. A resurgence of interest in flesh especially in art has led to a politics of abjection completely changing traditional aesthetics and is now giving light to an alternative discussion about the body in architecture. This book is dedicated to a future vision of the body in architecture questioning the contemporary relationship between our Human Flesh and the changing Architectural Flesh. Through the analysis and design of a variety of buildings and projects, Flesh is proposed as a concept that extends the meaning of skin, one of architecture's most fundamental metaphors. It seeks to challenge a common misunderstanding of skin as a flat and thin surface. In a time when a pervasive discourse about the impact of digital technologies risks turning the architectural skin ever more disembodied, this book argues for a thick embodied flesh by exploring architectural interfaces that are truly inhabitable. Different concepts of Flesh are investigated not only concerning the architectural and aesthetic but also the biological aspects. The latter is materialised in form of Synthetic Neoplasms which are proposed as new semi-living entities rather than more commonly derived from scaled-up analogies between biological systems and larger-scale architectural constructs. These neoplastic creations are identified as partly designed object and partly living material in which the line between the natural and the artificial is progressively blurred. Hybrid technologies and interdisciplinary work methodologies are thus required and lead to a revision of our current architectural practice.

Architecture of Modern China Jianfei Zhu,2013-10-31 A collection of essays on architecture of modern China arranged chronologically covering a period from 1729 to 2008 focusing mainly on the twentieth century. The distinctive feature of this book is a blending of critical and historical research taking a long-range perspective transcending the current scene and the Maoist period. This is a short elegant book that condenses the wide subject matter into key topics. **Industries of**

Architecture Katie Lloyd Thomas,Tilo Amhoff,Nick Beech,2015-11-06 At a time when the technologies and techniques of producing the built environment are undergoing significant change, this book makes central architecture's relationship to industry. Contributors turn to historical and theoretical questions as well as to key contemporary developments taking a humanities approach to the Industries of Architecture that will be of interest to practitioners and industry professionals as much as to academic researchers, teachers and students. How has modern architecture responded to mass production? How do we understand the necessarily social nature of production in the architectural office and on the building site? And how is architecture entwined within wider fields of production and reproduction: finance, capital, the spaces of regulation and management techniques? What are the particular effects of techniques and technologies and above all their inter-relations on those who labour in architecture: the buildings they produce and the discursive frameworks we mobilise to understand them?

Critical Architecture Jane Rendell,Jonathan Hill,Mark Dorrian,Murray Fraser,2007-09-12 Critical Architecture examines the relationship between critical practice in architecture and architectural criticism. Placing architecture in an interdisciplinary context, the book explores architectural criticism with reference to modes of criticism in other disciplines.

specifically art criticism and considers how critical practice in architecture operates through a number of different modes buildings drawings and texts With forty essays by an international cast of leading architectural academics this accessible single source text on the topical subject of architectural criticism is ideal for undergraduate as well as post graduate study

Architecture and Narrative Sophia Psarra,2009-01-06 Conceptual ordering spatial and social narrative are fundamental to the ways in which buildings are shaped used and perceived This intriguing book explores the ways in which these three dimensions interact in the design and life of buildings

The Architect as Worker Peggy Deamer,2015-07-30 Directly confronting the nature of contemporary architectural work this book is the first to address a void at the heart of architectural discourse and thinking For too long architects have avoided questioning how the central aspects of architectural practice professionalism profit technology design craft and building combine to characterize the work performed in the architectural office Nor has there been a deeper evaluation of the unspoken and historically determined myths that assign cultural symbolic and economic value to architectural labor The Architect as Worker presents a range of essays exploring the issues central to architectural labor These include questions about the nature of design work immaterial and creative labor and how it gets categorized spatialized and monetized within architecture the connection between parametrics and BIM and labor theories of architectural work architectural design as a cultural and economic condition entrepreneurialism and the possibility of ethical and rewarding architectural practice The book is a call to arms and its ultimate goal is to change the practice of architecture It will strike a chord with architects who will recognize the struggle of their profession with students trying to understand the connections between work value and creative pleasure and with academics and cultural theorists seeking to understand what grounds the discipline
