ROCK CYCLE

Rocks are constantly changing. This change is called the rock cycle. This change does not happen over night. It takes millions of years for the rocks to change.

There are 3 types of rocks that can be found on Earth.

Metamorphic Rocks: Metamorphic rocks are formed by great heat and pressure. Usually, they are found inside the Earth's crust where there is enough heat and pressure to form these rocks. If Metamorphic rocks are often made from other types of rocks. If you were to take a shale rock, a sedimentary rock, and change it to slate. We often can see metamorphic rocks in marble, quartzite, and soapstone.

Igneous Rocks: Igneous rocks are formed by volcanoes. When a volcano erupts, it spews hot molten rock called magma or lava. The magma will cool down and harden once it reaches the Earth's surface or somewhere within the crust. This hardened rock is called igneous rock. Examples of igneous rocks are basalt and granite.

Sedimentary Rocks: Sedimentary rocks are formed by years and sediment compacting together and becoming hard. A years of sediment carrying lots of small pieces of rocks and stream or a river will carry lots of small pieces of rocks and minerals to a larger body of water. These rocks will settle at the bottom for a long period of time. (maybe even millions of years). They will form into solid rock. Examples of sedimentary rocks are shale, limestone, and sandstone.
