

# 8. STATIC ELECTRICITY

## QUESTIONS AND ANSWERS

balanced, the object is neutral, i.e. there is no net charge on the object. If the forces are not balanced, the object is said to be 'charged'.

**Try this.**

How would two charged objects interact with each other?

Take one end of a glass rod against a silk cloth. Due to rubbing a small charge will get transferred from one to the other. As a result both the objects will become what charged. Suspend this rod freely in air with the help of a thread. Now charge another glass rod in the same way and bring it near the suspended rod. What do you observe? The two rods push each other away. Now take a piece of woolen cloth. Rub one of its ends against a glass rod. Bring that end near the suspended glass rod. Now what do you observe? The two rods are pulled towards each other.

What did you find in the first experiment? Two rods carrying similar charges push each other away. This is called repulsion. We learn from the second experiment that rods carrying opposite types of charges get pulled towards each other. This is called attraction.

A.1 Repulsion and attraction

The scientist Benjamin Franklin named the electric charges positive charge (+) and negative charge (-).
