Verification and Validation in Systems Engineering Mourad Debbabi,Fawzi Hassaïne,Yosr Jarraya,Andrei Soeanu,Luay Alawneh,2010-11-16 At the dawn of the 21st century and the information age communication and computing power are becoming ever increasingly available virtually pervading almost every aspect of modern socio economical interactions Consequently the potential for realizing a significantly greater number of technology mediated activities has emerged Indeed many of our modern activities are heavily dependant upon various underlying systems and software intensive platforms Such technologies are commonly used in everyday activities such as commuting traffic control and management mobile computing navigation mobile communication Thus the correct function of the forenamed computing systems becomes a major concern This is all the more important since in spite of the numerous updates patches and firmware revisions being constantly issued newly discovered logical bugs in a wide range of modern software platforms e.g operating systems and software intensive systems e.g embedded systems are just as frequently being reported In addition many of today's products and services are presently being deployed in a highly competitive environment wherein a product or service is succeeding in most of the cases thanks to its quality to price ratio for a given set of features Accordingly a number of critical aspects have to be considered such as the ability to pack as many features as needed in a given product or service while currently maintaining high quality reasonable price and short time to market

Object-Oriented Analysis and Design Using UML MAHESH P. MATHA, 2008-04-09 A modern computer program such as the one that controls a rocket's journey to moon is like a medieval cathedral vast complex layered with circuits and mazes To write such a program which probably runs into a hundred thousand lines or more knowledge of an object oriented language like Java or C is not enough Unified Modelling Language UML elaborated in detail in this book is a methodology that assists in the design of software systems The first task in the making of a software product is to gather requirements from the client This well organized and clearly presented text develops a formal method to write down these requirements as Use Cases in UML Besides it also develops the concepts of static and dynamic modelling and the Unified Process that suggests incremental and iterative development of software taking client feedback at every step The concept of Design Patterns which provide solutions to problems that occur repeatedly during software development is discussed in detail in the concluding chapters Two appendices provide solutions to two real life problems Case Studies mapping of examples into Java code that are executable on computers summary and Review Questions at the end of every chapter make the book reader friendly The book will prove extremely useful to undergraduate and postgraduate students of Computer Science and Engineering Information Technology and Master of Computer Applications MCA It will also benefit professionals who wish to sharpen their programming skills using UML
