PARTICLE THEORY AND STATES OF MATTER

What is the arrangement of particles in a solid? What is the arrangement of particles in a liquid? What is the arrangement of particles in a gas? What is the change of state called? Can you give examples of substances that can do this?

Particle Theory is the theory that all matter is made up of tiny particles. These particles have different shapes and sizes. They are constantly moving and vibrating. The arrangement of particles in a solid is different from the arrangement of particles in a liquid and the arrangement of particles in a gas.

States of Matter are the different forms that matter can take. There are three main states of matter: solid, liquid, and gas. Each state has different properties. For example, a solid has a fixed shape and volume, a liquid has a fixed volume but no fixed shape, and a gas has no fixed shape or volume.

Changes of State are the processes by which matter changes from one state to another. There are three main changes of state: melting, boiling, and condensation. Each change of state involves a change in the arrangement of the particles.
