Mathematical Circle Diaries, Year 2 Anna Burago, 2018-07-03 Mathematical circles with their question driven approach and emphasis on problem solving expose students to the type of mathematics that stimulates the development of logical thinking creativity analytical abilities and mathematical reasoning These skills while scarcely introduced at school are in high demand in the modern world This book a sequel to Mathematical Circle Diaries Year 1 teaches how to think and solve problems in mathematics The material distributed among twenty nine weekly lessons includes detailed lectures and discussions sets of problems with solutions and contests and games In addition the book shares some of the know how of running a mathematical circle The book covers a broad range of problem solving strategies and proofing techniques as well as some more advanced topics that go beyond the limits of a school curriculum The topics include invariants proofs by contradiction the Pigeonhole principle proofs by coloring double counting combinatorics binary numbers graph theory divisibility and remainders logic and many others When students take science and computing classes in high school and college they will be better prepared for both the foundations and advanced material The book contains everything that is needed to run a successful mathematical circle for a full year This book written by an author actively involved in teaching mathematical circles for fifteen years is intended for teachers math coaches parents and math enthusiasts who are interested in teaching math that promotes critical thinking Motivated students can work through this book on their own In the interest of fostering a greater awareness and appreciation of mathematics and its connections to other disciplines and everyday life MSRI and the AMS are publishing books in the Mathematical Circles Library series as a service to young people their parents and teachers and the mathematics profession

[A Primer for Mathematics Competitions](#) Alexander Zawaira, Gavin Hitchcock, 2008-10-31 The importance of mathematics competitions has been widely recognised for three reasons they help to develop imaginative capacity and thinking skills whose value far transcends mathematics they constitute the most effective way of discovering and nurturing mathematical talent and they provide a means to combat the prevalent false image of mathematics held by high school students as either a fearsomely difficult or a dull and uncreative subject This book provides a comprehensive

training resource for competitions from local and provincial to national Olympiad level containing hundreds of diagrams and graced by many light hearted cartoons It features a large collection of what mathematicians call beautiful problems non routine provocative fascinating and challenging problems often with elegant solutions It features careful systematic exposition of a selection of the most important topics encountered in mathematics competitions assuming little prior knowledge Geometry trigonometry mathematical induction inequalities Diophantine equations number theory sequences and series the binomial theorem and combinatorics are all developed in a gentle but lively manner liberally illustrated with examples and consistently motivated by attractive appetiser problems whose solution appears after the relevant theory has been expounded Each chapter is presented as a toolchest of instruments designed for cracking the problems collected at the end of the chapter Other topics such as algebra co ordinate geometry functional equations and probability are introduced and elucidated in the posing and solving of the large collection of miscellaneous problems in the final toolchest An unusual feature of this book is the attention paid throughout to the history of mathematics the origins of the ideas the terminology and some of the problems and the celebration of mathematics as a multicultural cooperative human achievement As a bonus the aspiring mathlete may encounter in the most enjoyable way possible many of the topics that form the core of the standard school curriculum

The Indiana College Mathematics Competition (2001–2023) Adam Coffman, Justin Gash, Rick Gillman, John Rickert, 2024-07-31 This book gathers problems based on over twenty years of the Indiana College Mathematics Competition a regional problem solving contest for teams of undergraduates Its problems and solutions are accessible to students in a standard college curriculum not necessarily with Olympiad level training Problem sets form the core of Part I covering myriad aspects of algebra calculus number theory probability and geometry Chapters are organized by year and an index allows easy navigation through specific topics In Part II the reader finds detailed solutions to the exercises With revised solutions designed for a didactical approach this book can be especially useful as a resource for problem solving courses in college mathematics or as practice problems for graduate entrance exams This volume is a sequel to Rick Gillman's A Friendly Competition which documented the first 35 years of the competition
