Clinician's Guide To Neuropsychological Assessment Rodney D. Vanderploeg, 2014-04-04 Neuropsychological assessment is a difficult and complicated process Often experienced clinicians as well as trainees and students gloss over fundamental problems or fail to consider potential sources of error Since formal test data on the surface appear unambiguous and objective they may fall into the habit of overemphasizing tests and their scores and underemphasizing all the factors that affect the validity reliability and interpretability of test data But interpretation is far from straightforward and a pragmatic application of assessment results requires attention to a multitude of issues This long awaited updated and greatly expanded second edition of the Clinician's Guide to Neuropsychological Assessment like the first focuses on the clinical practice of neuropsychology Orienting readers to the entire multitude of issues it guides them step by step through evaluation and helps them avoid common misconceptions mistakes and methodological pitfalls It is divided into three sections fundamental elements of the assessment process special issues settings and populations and new approaches and methodologies The authors all of whom are actively engaged in the clinical practice of neuropsychological assessment as well as in teaching and research do an outstanding job of integrating the academic and the practical The Clinician's Guide to Neuropsychological Assessment Second Edition will be welcomed as a text for graduate courses but also as an invaluable hands on handbook for interns postdoctoral fellows and experienced neuropsychologists alike No other book offers its combination of breadth across batteries and approaches depth and practicality *Practitioner's Guide to Clinical*

specific types of neuropsychological deficit The purpose of this volume is to review these developments particularly with reference to their implications for application in clinical settings The history of this book's development is of particular interest Some years ago the Veterans Administration became concerned with developing an optimal method of neuropsychological assessment for its many health care related facilities Initially the problem was conceptualized in terms of whether the VA should encourage wider use of the long established Halstead Reitan Neuropsychological Test Battery HRB or promote more extensive use of the recently developed Luria Nebraska Neuropsychological Test Battery LNNB A conference was funded to bring together authorities in clinical neuropsychology to discuss this matter and present a series of papers to invited psychologists from various VA facilities
