in Parallel and Distributed Computing Wen-Jyi Hwang, 2017-07-19 Parallel and distributed computing has been one of the most active areas of research in recent years The techniques involved have found significant applications in areas as diverse as engineering management natural sciences and social sciences This book reports state of the art topics and advances in this emerging field Completely up to date aspects it examines include the following 1 Social networks 2 Smart grids 3 Graphic processing unit computation 4 Distributed software development tools 5 Analytic hierarchy process and the analytic network process Guide to High Performance Distributed Computing K.G. Srinivasa, Anil Kumar Muppalla, 2015-02-09 This timely text reference describes the development and implementation of large scale distributed processing systems using open source tools and technologies Comprehensive in scope the book presents state of the art material on building high performance distributed computing systems providing practical guidance and best practices as well as describing theoretical software frameworks Features describes the fundamentals of building scalable software systems for large scale data processing in the new paradigm of high performance distributed computing presents an overview of the Hadoop ecosystem followed by step by step instruction on its installation programming and execution Reviews the basics of Spark including resilient distributed datasets and examines Hadoop streaming and working with Scalding Provides detailed case studies on approaches to clustering data classification and regression analysis Explains the process of creating a working recommender system using Scalding and Spark Prototyping of Concurrent Control Systems Implemented in FPGA Devices Remigiusz Wiśniewski, 2016-09-30 This book focuses on prototyping aspects of concurrent control systems and their further implementation and partial reconfiguration in programmable devices Further it lays out a full prototyping flow for concurrent

control systems Based on a given primary specification a system is described with an interpreted Petri net which naturally reflects the concurrent and sequential relationships of the design The book shows that apart from the traditional option of static configuration of the entire system the latest programmable devices especially FPGAs offer far more sophistication Partial reconfiguration allows selected parts of the system to be replaced without having to reprogram the entire structure of the device Approaches to dynamic and static partial reconfiguration of concurrent control systems are presented and described in detail p The theoretical work is illustrated by examples drawn from various applications with a milling machine and a traffic light controller highlighted as representative interpreted Petri nets Given the ubiquity of concurrent control systems in a huge variety of technological areas including transportation medicine artificial intelligence manufacturing security and safety and planetary exploration the innovative software and hardware design methods described here will be of considerable interest to control engineers and systems and circuits researchers in many areas of industry and academia

Artificial Intelligence and Soft Computing Leszek Rutkowski, Marcin Korytkowski, Rafal Scherer, Ryszard Tadeusiewicz, Lotfi A. Zadeh, Jacek M. our financial system we explore the pillars of money and payments that are at a turning point with the replacement of key infrastructural components necessary for the future of what we call the Digital Financial Ecosystem Digital identity and data privacy also form part of this broader puzzle We then look to the future to consider some of the latest trends and what if scenarios Where do we see Redecentralisation at play in the Digital Financial Ecosystem What is the role of technology in this e.g. Web3 the Metaverse and Decentralised Finance Can Redecentralisation support an alignment of values across people governments and businesses What is the role of technology in this And finally do we need a new digital social contract to underpin and protect our digital lives
