String Theory Research Progress Ferenc N. Balogh, 2008 String theory is a model of fundamental physics whose building blocks are one dimensional extended objects called strings rather than the zero dimensional point particles that form the basis for the standard model of particle physics The phrase is often used as shorthand for Superstring theory as well as related theories such as M theory By replacing the point like particles with strings an apparently consistent quantum theory of gravity emerges Moreover it may be possible to unify the known natural forces gravitational electromagnetic weak nuclear and strong nuclear by describing them with the same set of equations Studies of string theory have revealed that it predicts higher dimensional objects called branes String theory strongly suggests the existence of ten or eleven in M theory space time dimensions as opposed to the usual four three spatial and one temporal used in relativity theory Target Station Optimization for the High-Brilliance Neutron Source HBS Jan Philipp Dabbruck, 2018-12-29 In the present work the target station of the accelerator driven neutron source HBS is optimized in comprehensive parameter studies using the Monte Carlo method The dependence of the most important performance characteristics of such a system on the external parameters is investigated neglecting technical and mechanical limitations In this way qualitative and quantitative statements for all possible configurations and envisaged applications can be derived and should be considered in the detailed planning of such facilities For this purpose different scenarios are considered that place completely different requirements on the design of the target station The central statements derived in this thesis can be transferred to any framework conditions such as different accelerator energies so that these results can be used in the development of other neutron sources which together

with the HBS form a European network and provide a prosperous community in neutron science **Publications of the National Bureau of Standards ... Catalog** United States.  Bayesian Multiple Target Tracking, Second Edition Lawrence D. Stone,Roy L. Streit,Thomas L. Corwin,Kristine L.

Bell,2013-12-01 This second edition has undergone substantial revision from the 1999 first edition recognizing that a lot has changed in the multiple target tracking field One of the most dramatic changes is in the widespread use of particle filters to implement nonlinear non Gaussian Bayesian trackers This book views multiple target tracking as a Bayesian inference problem Within this framework it develops the theory of single target tracking multiple target tracking and likelihood ratio detection and tracking In addition to providing a detailed description of a basic particle filter that implements the Bayesian single target recursion this resource provides numerous examples that involve the use of particle filters With these examples illustrating the developed concepts algorithms and approaches the book helps radar engineers develop tracking solutions when observations are non linear functions of target state when the target state distributions or measurement error distributions are not Gaussian in low data rate and low signal to noise ratio situations and when notions of contact and association are merged or unresolved among more than one target
