Lee Morrison, Louise Nash, 1980    *The Oxford Handbook of the Five Factor Model* Thomas A. Piedmont, 2013-11-11 The assessment of individual differences has a long history As early as 2200 B C the Chinese were employing methods to select candidates for civil service positions Over the ensuing centuries philosophers theologians and the nobility all noticed and debated the role of character in shaping the destiny and quality of individual lives This interest spawned widely different methods of evaluating the timbre of temperament bumps on the head lines on the hand shape of the body all of which were employed in attempts to gain insight into basic human motives The emergence of the scientific method and its application to this endeavor reinvigorated society's efforts in this direction and an abundant variety of assessment instruments consequently became available The outbreak of World War I created a need for the efficient assessment of individual differences in large groups Such instruments as the Woodworth Personal Data Sheet and the Army Alpha Test resulted in genuine breakthroughs in assessment technology These tests provided standardized sets of items that permitted quantitative comparisons among people Over the years numerous scales have been developed which have been based on widely differing levels of psychometric sophistication    *Technical Paper - Army Research Institute for the Behavioral and Social Sciences*, 1978    *Summary of ARI Research on Military Delinquency* D. B. Bell, R. F. Holz, 1975 Most ARI research on military delinquency has focused on predicting at the point of entry those personnel most likely to commit delinquent acts within a fixed time period e g by the end of Basic Combat Training Across the variety of investigations which focused on various types of delinquency some consistent findings emerge Component of service i e volunteers vs draftees and several closely associated variables age at entry level of education and mental ability are associated with delinquent acts such background data and peer ratings provide the best predictors Attempts to develop a more precise profile of the military delinquent have not been very successful and programs aimed at rehabilitation of potential delinquents have actually proved

counterproductive All of these outcomes suggest that future research should concentrate more on the context in which delinquency occurs and less on the characteristics of those who commit delinquent acts

**Behavioral Assessment and Rehabilitation of the Traumatically Brain-Damaged** Barry A. Edelstein, Eugene T. Couture, 2013-11-22 This book developed out of the editors longstanding interest in the retraining of traumatically brain damaged adults and the management of their behavior by family members A search for relevant

experimental evidence to support the clinical use of behavioral principles for retraining which began in 1977 turned up little empirical support. Moreover, the literature on retraining was dispersed among a variety of journals published in various countries. Nowhere was there a compendium of literature that addressed issues of assessment and retraining. There was no place to turn if one wanted to move from a standard neuropsychological evaluation to the retraining of skill deficits revealed in the evaluation. We have attempted to edit a book that represents what we had hoped to find in the literature and could be used by professionals in clinical psychology, clinical neuropsychology, rehabilitation medicine, physical therapy, speech therapy, and other disciplines that address rehabilitation of brain-damaged adults: a book that addresses assessment and rehabilitation issues and is sufficiently detailed to offer the reader a starting point in developing behavioral assessment and rehabilitation programs. The book contains conceptual foundations, reviews of research, descriptions of successful rehabilitation programs, and relatively detailed approaches to the retraining of specific skills. A shift from an assessment-based practice to one encompassing both prescriptive assessment and treatment has become a recognized transition in the neuropsychological literature and was best articulated in an article by Gerald Goldstein in March of 1979. *Eugenic Nation* Alexandra Minna Stern, 2016. With an emphasis on the American West, *Eugenic Nation* explores the long and unsettled history of eugenics in the United States. This expanded second edition includes shocking details that demonstrate that the story is far from over. Alexandra Minna Stern explores the unauthorized sterilization of female inmates in California state prisons and ongoing reparations for North Carolina victims of sterilization, as well as the topics of race-based intelligence tests, school segregation, the U.S. Border Patrol, tropical medicine, the environmental movement, and opposition to better breeding. Radically new and relevant, this edition draws from recently uncovered historical records to demonstrate patterns of racial bias in California's sterilization program and to recover personal experiences of reproductive injustice. Stern connects the eugenic past to the genomic present with attention to the ethical and social implications of emerging genetic technologies. Provided by publisher. **A Handbook on Stuttering, Seventh Edition** Oliver Bloodstein, Nan Bernstein Ratner, Shelley B. Brundage, 2021-06-25. The revised edition of *A Handbook on Stuttering* continues its remarkable role as the authoritative first-line resource for researchers and clinicians who work in the field of fluency and stuttering. Now in its seventh edition, this unique book goes beyond merely updating the text to include coverage of roughly 1,000 articles related to stuttering research and practice that have been published since 2008. This extended coverage integrates the more traditional body of research with evolving views of stuttering as a multifactorial dynamic disorder. Comprehensive, clear, and accurate, this text provides evidence-based practical information critical to understanding stuttering. By thoroughly examining the intricacies of the disorder, *A Handbook on Stuttering, Seventh Edition* lays the foundation needed before considering assessment and treatment. New to the Seventh Edition: A completely reorganized table of contents including two new chapters; The deletion of approximately 1,000 non-peer-reviewed references from the previous edition to assure discussion of the highest quality.

evidence on stuttering New content on the development of stuttering across the lifespan and assessment Given the Handbook's historic role as a primary reference for allied professionals a new chapter that addresses myths and misconceptions about stuttering Expanded coverage on the role of temperament in childhood stuttering Expanded coverage of brain based research genetics and treatment findings A thoroughly updated chapter on conditions under which stuttering fluctuates Brief tutorial overviews of critical concepts in genetics neuroimaging language analysis and other relevant constructs to better enable reader appreciation of research findings A greater selection of conceptual illustrations of basic concepts and findings than in prior editions Integrated cross referencing to content across chapters
