# Solving Two-Step Equations

A **solution of an equation** is the value (or values) of the variable that makes the equation true. You can check the solution of the equation using the substitution property.

To find the solution of an equation, you can use **inverse operations** <sup>↑ plugging in</sup> which are operations that undo one another.

When solving an equation, use inverse operations to isolate the term with the variable first, then isolate the variable.

to one side,  
you must do to  
the other!
