Review of the Army's Technical Guides on Assessing and Managing Chemical Hazards to Deployed Personnel National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Toxicology, Subcommittee on the Toxicological Risks to Deployed Military Personnel, 2004-08-03 To guide mission planning military decision makers need information on the health risks of potential exposures to individual soldiers and their potential impact on mission operations To help with the assessment of chemical hazards the U S Army Center for Health Promotion and Preventive Medicine developed three technical guides for characterizing chemicals in terms of their risks to the mission and to the health of the force The report reviews these guides for their scientific validity and conformance with current risk assessment practices The report finds that the military exposure guidelines are appropriate with some modification for providing force health protection but that for assessing mission risk a new set of exposure guidelines is needed that predict concentrations at which health effects would degrade the performance of enough soldiers to hinder mission accomplishment

Long-Term Health Consequences of Exposure to Burn Pits in Iraq and Afghanistan Institute of Medicine, Board on the Health of Select Populations, Committee on the Long-Term Health Consequences of Exposure to Burn Pits in Iraq and Afghanistan, 2011-10-31 Many veterans returning from the conflicts in Iraq and Afghanistan have health problems they believe are related to their exposure to the smoke from the burning of waste in open air burn pits on military bases Particular controversy surrounds the burn pit used to dispose of solid waste at Joint Base Balad in Iraq which burned up to 200 tons of waste per day in 2007 The Department of Veterans Affairs asked the IOM to form a committee to determine the long term health effects from exposure to these burn pits Insufficient evidence prevented the IOM committee from developing firm conclusions This report therefore recommends that along with more efficient data gathering methods a study be conducted that would evaluate the health status of service members from their time of deployment over many years to determine their incidence of chronic diseases [Handbook of Chemical and Biological Warfare Agents](#) D.
