

2 Transmission system – components

2.1 System design

The transmission system consists of the transmission (1) and the components needed to actuate the system. The transmission actuator (2) and clutch actuator (3) components are integrated in the transmission.

The peripheral components, i.e. the range selector (4) remote control, display (5) and ZF 6 module (6) should also be installed in the vehicle.

When integrated in the vehicle system, the ZF-6HP900C no longer needs its own peripheral components and instead uses the vehicle's systems such as engine electronics with accelerator pedal (8) and brake pedal (7), electronic brake system with wheel speed sensors etc.

The ZF-6HP900C is integrated in the overall vehicle system by networking the vehicle electronics via a CAN bus. The peripheral system dependencies resulting from this must be investigated as part of a vehicle integration (Table 1).

2.2 Transmission and shift system

2.2.1 Description of transmission

The ZF-6HP900C transmission consists of a four-speed section in the 1st-speed version or a three-speed section in the 1st- and 3rd-speed versions as well as a splitter group (S/P) and a rear-mounted planetary range change group (R/P).

The transmission is based on the twin-shaft parallel design principle. This compact and comparatively lightweight design ensures a favourable distribution of torque, lower spline loading levels and therefore a high degree of efficiency.

The 4th-speed transmission section is designed with a constant mesh shift system. Synchronisation is accomplished using the IGC* and transmission brake. The splitter and range change groups have synchro mesh.
