

TEAM MEMBERS: _____

OBJECTIVE: How do water molecules move in and out of cells?

Why?

Water accounts for over 70% of the human body. If water levels are not regulated and maintained in an organism the consequences can be disastrous. Cells and tissues may swell, blood cells burst, or the brain may expand so much it pushes on the skull, leading to brain damage and death. So what exactly is the process that allows organisms to regulate and maintain their water content?

Model 1 – Movement of Water In and Out of Cells

1-A solution consists of solute and solvent mixed together. IDENTIFY the solute and solvent and their symbols in Model 1.

solute: _____ / _____

solvent: _____ / _____

2-CONSIDER the size of the sugar molecule and water molecule in Model 1. Which molecules are able to move through the cell membrane? _____

3-COUNT the molecules in model 1 and complete the table below.

	Inside the Cell	Outside the Cell
Number of sugar molecules		
Number of water molecules		
Ratio of water to sugar		

4-DETERMINE which solutions are more concentrated in Model 1—inside or outside the cell.

EXPLAIN in terms of ratio of solute to solvent particles.
