Covenants Not to Compete *Shaping Shakespeare for Performance* Catherine Loomis, Sid Ray, 2015-10-29

Shaping Shakespeare for Performance The Bear Stage collects significant work from the 2013 Blackfriars Conference The conference sponsored by the American Shakespeare Center brings together scholars actors directors dramaturges and students to share important new work on the staging practices used by William Shakespeare and his contemporaries The volume s contributors range from renowned scholars and editors to acclaimed directors highly trained actors and budding researchers The topics cover a similarly wide range a close reading of an often cut scene from Henry V meets an account of staging pregnancy a meticulous review of early modern contract law collides with an analysis of an actor in a bear costume an account of printed punctuation from the 1600s encounters a study of audience interaction and empowerment in King Lear the identification of candid doubling in A Comedy of Errors meets the troubling of gender categories in The Roaring Girl The essays focus on the practical applications of theory scholarship and editing to performance of early modern plays Experiencing Other Minds in the Courtroom Neal Feigenson, 2016-12-26

Sometimes the outcome of a lawsuit depends upon sensations known only to the person who experiences them such as the buzzing sound heard by a plaintiff who suffers from tinnitus after an accident Lawyers litigants and expert witnesses are now seeking to re create these sensations in the courtroom using digital technologies to simulate litigants subjective experiences and thus to help jurors know not merely know about what it is like to be inside a litigant s mind But with this novel type of evidence comes a host of questions Can anyone really know what it is like to have another person s sensory experiences Why should courts allow jurors to see or hear these simulations And how might this evidence alter the ways in which judges and jurors do justice In *Experiencing Other Minds in the Courtroom* Neal Feigenson turns the courtroom into a forum for exploring the profound philosophical psychological and legal ramifications of our efforts to know what other people s conscious experiences are truly like Drawing on disciplines ranging from cognitive psychology to psychophysics to media studies Feigenson harnesses real examples of digitally simulated subjective perceptions to explain how the epistemological value of this evidence is affected by who creates it how it is made and how it is presented Through his close scrutiny of the different kinds of simulations and the different knowledge claims they make Feigenson is able to suggest best practices for how we might responsibly incorporate such evidence into the courtroom **Goldstein Trial Technique** Irving Goldstein, Fred Lane, 1969 **The Army Lawyer** , 2014-06 *Bayesian Methods and Ethics in a Clinical Trial Design* Joseph B. Kadane, 2011-09-20

How to conduct clinical trials in an ethical and scientifically responsible manner This book presents a methodology for clinical trials that produces improved health outcomes for patients while obtaining sound and unambiguous scientific data It centers around a real world test case involving a treatment for hypertension after open heart surgery and explains how to use Bayesian methods to accommodate both ethical and scientific imperatives The book grew out of the direct

involvement in the project by a diverse group of experts in medicine, statistics, philosophy, and the law. Not only do they contribute essays on the scientific, technological, legal, and ethical aspects of clinical trials, but they also critique and debate each other's opinions, creating an interesting, personalized text.

Bayesian Methods and Ethics in a Clinical Trial Design
 Answers commonly raised questions about Bayesian methods. Describes the advantages and disadvantages of this method compared with other methods. Applies current ethical theory to a particular class of design for clinical trials. Discusses issues of informed consent and how to serve a patient's best interest while still obtaining uncontaminated scientific data. Shows how to use Bayesian probabilistic methods to create computer models from elicited prior opinions of medical experts on the best treatment for a type of patient. Contains several chapters on the process, results, and computational aspects of the test case in question. Explores American law and the legal ramifications of using human subjects.

For statisticians and biostatisticians and for anyone involved with medicine and public health, this book provides both a practical guide and a unique perspective on the connection between technological developments, human factors, and some of the larger ethical issues of our times.
