

Graphs of Trigonometric Functions

You need to be able to recognise the graphs of $\sin\theta$, $\cos\theta$ and $\tan\theta$

You will have seen all these graphs on your GCSE

The key points to remember are the peaks/troughs of each, and the points of intersection

The Cos graph is the same as the Sin graph, but shifted along (it starts at 1 instead of 0)

The Tan graph has lines called asymptotes. These are points the graph approaches but never reaches (90° , 270° etc...)

Period (length of wave) = 360° for Sin and Cos, and 180° for Tan

try out math experiments to see for themselves how ingenious ancient navigators and surveyors really were The analytic geometry part of the book links equations to many of these intuitive concepts which we explore through in depth explanations of manipulative models of conic sections This book is aimed at high school students who might be in Algebra II or Pre Calculus It shows the geometrical and practical sides of these topics that otherwise can drown in their own algebra Make Trigonometry builds on the basics of the authors earlier book Make Geometry and is intended as a bridge from that book to their Make Calculus book The user can read this book and understand the concepts from the photographs of 3D printable models alone However since many models are puzzle like we encourage the reader to print the models on any consumer grade filament based 3D printer The models are available for download in a freely available open source repository They were created in the free program OpenSCAD and can be 3D printed or modified by the student in OpenSCAD to learn a little coding along the way
