Although not mentioned, there are other ways to make existing programs work on ARMv7 and ARMv8 without the associated overheads:

1. **Definition of a function** (10 points) - A function f from a set A to a set B is a rule that assigns to each element a in A exactly one element b in B . We write $f(a) = b$.
2. **Domain and codomain** (10 points) - The domain of a function f is the set A from which elements are taken. The codomain is the set B to which elements are mapped.
3. **Image and preimage** (10 points) - The image of a set S under a function f is the set $f(S)$ of all elements in B that are mapped to by elements in S . The preimage of an element b in B is the set $f^{-1}(b)$ of all elements in A that map to b .
4. **Injective, surjective, and bijective functions** (10 points) - A function f is injective (one-to-one) if different elements in A map to different elements in B . It is surjective (onto) if every element in B has at least one preimage in A . A function that is both injective and surjective is bijective (one-to-one and onto).
5. **Composition of functions** (10 points) - If $f: A \rightarrow B$ and $g: B \rightarrow C$ are functions, then their composition $g \circ f: A \rightarrow C$ is defined by $(g \circ f)(a) = g(f(a))$.
6. **Inverse function** (10 points) - A function $f: A \rightarrow B$ has an inverse function $f^{-1}: B \rightarrow A$ if and only if f is bijective. The inverse function satisfies $f^{-1}(f(a)) = a$ and $f(f^{-1}(b)) = b$.
7. **Properties of functions** (10 points) - Functions can be added, subtracted, multiplied, and divided (where the divisor is not zero). The resulting function is also a function from A to B .
8. **Graph of a function** (10 points) - The graph of a function $f: A \rightarrow B$ is the set of points $(a, f(a))$ in the Cartesian plane, where a is in A and $f(a)$ is in B .
9. **Applications of functions** (10 points) - Functions are used in many areas of mathematics and science, including physics, chemistry, and economics.
10. **Conclusion** (10 points) - Functions are a fundamental concept in mathematics and have many important properties and applications.
