

The Cell Cycle

What controls the life and development of a cell?

Why?

An old piece of poetry says "to everything there is a season... a time to be born, a time to die." For cells, the line might say "a time to divide and a time to grow." In multicellular organisms, different types of cells have different roles and need to complete specific tasks. For example, a cell that isn't large enough is not useful for storing nutrients for later, but a cell that is too large will not be useful for transportation through a tiny capillary. In this activity, you will learn about the seasons of a cell's life, and in turn better understand how organisms function.

Model 1 – The Cell Cycle

1. How many phases are in the cell cycle as shown in the diagram in Model 1?
2. Starting at the starred cell, what is the order of the stages of a cell's life?
3. During which phase does the size of the cell increase?
4. During which phase does the number of cells increase?

Targeting Cell Survival Pathways to Enhance Response to Chemotherapy, 2018-03-28 Targeting Cell Survival Pathways to Enhance Response to Chemotherapy encompasses recently developed molecular targeting agents and approaches that suppress cell survival signaling Cell survival signaling attenuates the effectiveness of conventional chemotherapy and numerous mechanisms have been described and continue to be described which contribute to cell survival in the face of chemotherapy treatment Key pathways leading to chemoresistance emanate from growth factor receptors PI3K STAT3 anti apoptotic Bcl 2 family members autophagy and the DNA damage response pathway New advances have underscored the potential of targeting each of these cell survival mechanisms to improve responsiveness to chemotherapy This book reviews these recent advances and provides a foundational background and hints of new opportunities for basic translational and clinical investigators focused on improving therapeutic responses to chemotherapy Presents cutting edge agents and approaches with proved success in different model systems that can be translated to a different type of cancer Brings updated information to be used to propose new clinical trials investigating innovative strategies for improving responses to chemotherapy Provides mechanistic details to help guide the design of laboratory studies associated with clinical trials
