

Extended-Reach Drilling: Breaking the 10-km Barrier

- Geosteering, torque reduction and casing flotation have all contributed to record-breaking extended-reach drilling achievements.
- The limits of directional drilling continue to be pushed back as horizontal reservoir sections greater than 2500 m are being drilled, cased, cemented and completed to tap reserves at extreme distances from surface wellsites.

Oilfield Review Winter 1997

2

- **Extended-reach drilling technology** recently achieved a new milestone with the drilling and completion of a 10-km [33,000-ft] stepout well, some 2 km [6600 ft] longer than the previous world record.
- The main technical **hurdles** to the success of this well were reducing torque and drag, controlling fluid circulation and maintaining directional control.
- Solutions were not simple because methods to mitigate technical challenges in one area often had adverse consequences in others.
- One factor, **drillstring rotation**, repeatedly surfaced as part of the solution to all the major problems in this extended-reach well.
