Division of Science Information, 1975 **Heavenly Numbers** Christopher Cullen, 2017 This book is a history of the development of mathematical astronomy in China from the late third century BCE to the early 3rd century CE a period often referred to as early imperial China It narrates the changes in ways of understanding the movements of the heavens and the heavenly bodies that took place during those four and a half centuries and tells the stories of the institutions and individuals involved in those changes It gives clear explanations of technical practice in observation instrumentation and calculation and the steady accumulation of data over many years but it centres on the activity of the individual human beings who observed the heavens recorded what they saw and made calculations to analyse

and eventually make predictions about the motions of the celestial bodies. It is these individuals, their observations, their calculations, and the words they left to us that provide the narrative thread that runs through this work. Throughout the book, the author gives clear translations of original material that allow the reader direct access to what the people in this book said about themselves and what they tried to do. Manual of Instructions for the Survey of the Public Lands of the United States, 1947 United States. Bureau of Land Management, 1947 *Choosing and Using a New CAT* Rod Mollise, 2020-05-22

Catadioptric telescopes (CATs) such as the Schmidt-Cassegrains remain popular among amateur astronomers for their ability to reveal thousands of beautiful deep space wonders. Additionally, their computer-assisted capabilities allow them to automatically point to and track celestial objects, making astronomy accessible to more people than ever before. However, selecting the right one and learning how to use it can be difficult for stargazers both old and new. That's where this book comes in. The first edition, published in 2009, has remained the standard reference for mastering these popular instruments. This revised edition brings the material completely up to date with several extensively rewritten chapters covering the most recent developments in telescope and camera equipment as well as computer software. Through the author's 45 years of experience with catadioptric telescopes, readers will learn to decide which catadioptric telescope is right for them, to choose a specific make and model, and finally to use the telescope in the field. Covered in other chapters are Solar System and deep sky observations, astrophotography, and computer control of CATs, and troubleshooting and maintaining your equipment. If you dream of owning a telescope or are frustrated by the telescope you already own, this is the book for you. **Willing's Press**
