

This command is used to turn off WiMAX modem and RF. Before doing so, it disconnect from the network if it is already connected.

2.2.2.4. wb_ne

This command is used to initiate network entry procedure when the device is in STANDBY state. This command is discarded if the device is in other states. On successful connection, the device state is changed to ACTIVE. Otherwise, it stays in STANDBY state.

2.2.2.5. wb_nd

This command is used to disconnect from the network. The device state is changed from ACTIVE to STANDBY.

2.2.2.6. wb_bs

This command is for setting the bandwidth field in parameter block. After setting the bandwidth, you should reboot. You can choose 0 for 8.75Mhz, 3 for 5Mhz, 6 for 10Mhz as an argument.

2.2.3. WiMAX Text DM Commands

GCT WiMAX MAC provides an easy way to fine-tune a numerous parameters that affect the behavior of WiMAX device.

These commands are used to control the low-level MAC behavior. For detailed information, please refer to “GCT WiMAX Text DM Reference Manual”.

2.2.4. Command Batch Processing

User can list commands listed above in [DM command] section of WiMAX configuration file (/etc/wibro.conf). The WiMAX connection manager executes these commands automatically, alleviating the need to the same thing repeatedly. For example, we have listed two commands; “d ver” is the WiMAX Text DM commands that shows the MAC-PHY version of the firmware and “wb_ru” turns on the WiMAX modem and RF. The developers can find the MAC and PHY parameters that best fit the targeting WiMAX network by trying WiMAX Text DM commands with different parameters. Once they are found, those settings can be put into the configuration file.

2.3. Control of connection to WiMax network

2.3.1. Connection with dynamic IP allocation

WiMax connection manager automatically tries to connect to the WiMax network, if some variables defined in the configuration file for WiMax connection manger (/etc/wcm.conf) are YES, and WiMax modem and RF are turned on. As seen in the example code of /etc/wcm.conf in section 5.1, **autoconnection_enable** makes it try to connect to the network whenever it discovers the available network, **dhcp_enable** executes DHCP client to acquire IP configurations from the network service provider, and **wb_ru** in DM_command section turns on WiMax modem and RF.

Two configuration variables and one command enable the WiMax connection manager to try to connect to the WiMax network

```
> cat /etc/wcm.conf
```
