INSTALL WINDOW - CONTINUED

- Center the head expander (optional) over the head of the window as shown.

- From the interior, apply sealant to the inside edge of the outside stop. Set window with a sill adapter fully against the outside stop. Continue with "All Installations."

If installing into an Existing Frame or Rough Opening with a Flat Sill: Center the head expander (optional) over the head of the window. Set new window into the existing window frame or rough opening. Continue with "All Installations."

- If installing a window with fasteners through the jamb, secure with a #8 screw until fully seated (without deforming vinyl).

- If installing a window using the stop in method, this installation assumes installation from the interior with exterior stops applied before window installation. All stops must overhang the window frame by a minimum of 1/8".

ALL INSTALLATIONS

- Shim the side jambs between the rough opening or existing frame and the new window at each fastener location. Shims must be set 1/4" back from the interior of the window frame. Secure shims with sealant.
- Secure one upper corner as follows (skip to step 3 if using the stop in method):

- If installing a window with installation clips, drive a screw through the clip until the screw head contacts the clip. Do not bend the clip toward the rough opening (applying a shim between clip and rough opening can be helpful to prevent bending the clip).

- Mill and install exterior stops in the desired location if necessary for the side and head jambs.
 - Apply sealant to the interior side of the side and jamb exterior stops and verify it is properly shimmed until square, level, and plumb.
 - Apply backer rod and sealant or low expansion foam on the interior between the window frame and rough opening on all four sides.
 - Install interior stops on all four sides.
- Inspect window for square, level and plumb (adjust shims or remove and reinstall if necessary).
 - Fasten window in a similar manner through the remaining corners, and then through the rest of the fastener locations. If installing fasteners in the sill, apply silicone sealant to the screw threads and the head of the screw in the window frame (use more sealant as necessary to completely seal the screw head to the frame), or use a gasketed head screw.
 - Insert plugs into fastener holes not located in any operating track. Seal plugs in the sill with silicone. Replace track fillers if applicable.
 - On some double hung operating units only, jamb adjuster hardware is mounted in the middle installation holes to allow for some jamb adjustment. Install jamb adjuster screws until captured (first "click"), the screw may then be screwed in or out to adjust the jamb as needed. Replace lower sash.
