Enological Repercussions of Non-Saccharomyces Species 2.0 Antonio Morata,2021-04-15 The use of non Saccharomyces yeast species is currently a biotechnology trend in enology for which they are being broadly used to improve the sensory profile of wines because they affect aroma color and mouthfeel They have become a powerful biotool to modulate the influence of global warming on grape varieties helping to maintain the acidity decrease the alcoholic degree stabilize wine color and increase freshness In cool climates some non Saccharomyces can promote demalication or color stability by the formation of stable derived pigments Additionally non Saccharomyces yeasts open new possibilities in biocontrol for removing spoilage yeast and bacteria or molds that can produce and release mycotoxins and thereby help in reducing applied SO₂ levels

Microbial Enzyme Technology in Food Applications Ramesh C. Ray, Cristina M. Rosell, 2017-03-27. The aim of food processing is to produce food that is palatable and tastes good, extend its shelf life, increase the variety and maintain the nutritional and healthcare quality of food. To achieve favorable processing conditions and for the safety of the food to be consumed, use of food grade microbial enzymes or microbes being the natural biocatalysts is imperative. This book discusses the uses of enzymes in conventional and non conventional food and beverage processing as well as in dairy processing, brewing, bakery and wine making. Apart from conventional uses, the development of bioprocessing tools and techniques have significantly expanded the potential for extensive application of enzymes such as in production of bioactive peptides, oligosaccharides and lipids, flavor and colorants. Some of these developments include extended use of the
