Deep Learning in Textual Low-Data Regimes for Cybersecurity Markus Bayer, 2025-08-20 In today's fast paced cybersecurity landscape professionals are increasingly challenged by the vast volumes of cyber threat data making it difficult to identify and mitigate threats effectively Traditional clustering methods help in broadly categorizing threats but fall short when it comes to the fine grained analysis necessary for precise threat management Supervised machine learning offers a potential solution but the rapidly changing nature of cyber threats renders static models ineffective and the creation of new models too labor intensive This book addresses these challenges by introducing innovative low data regime methods that enhance the machine learning process with minimal labeled data The proposed approach spans four key stages Data Acquisition Leveraging active learning with advanced models like GPT 4 to optimize data labeling Preprocessing Utilizing GPT 2 and GPT 3 for data augmentation to enrich and diversify datasets Model Selection Developing a specialized cybersecurity language model and using multi level transfer learning Prediction Introducing a novel adversarial example generation method grounded in explainable AI to improve model accuracy and resilience
