Granatstein,2007-10-29 Wireless communications are based on the launching propagation and detection of electromagnetic waves emitted primarily at radio or microwave frequencies Their history can be traced back to the mid 19th century when James Clerk Maxwell formulated the basic laws of electromagnetism and Heinrich Hertz demonstrated the propagation of radio waves across his laboratory Recent engineering breakthroughs have led to wireless communication systems that have not only revolutionized modern lifestyles but have also launched new industries Based on the author's course in the physics of wireless communications Physical Principles of Wireless Communications provides students with a solid foundation in modern wireless communication systems It offers rigorous analyses of the devices and physical mechanisms that constitute the physical layers of these systems Starting with a review of Maxwell's equations the textbook details the operation of antennas and antenna arrays teaching students how to perform the necessary design calculations It also explores the propagation of electromagnetic waves leading to important descriptions of mean path loss The text also reviews the principles of probability theory enabling students to calculate the margins that must be allowed to account for statistical variation in path loss In addition it covers the physics of Geostationary Earth Orbiting GEO satellites and Low Earth Orbiting LEO satellites so students may evaluate and make first order designs of satellite communications SATCOM systems Next Generation Wireless Communications Using Radio over Fiber Nathan J. Gomes,Paulo P. Monteiro,Atilio Gameiro,2012-08-15 Taking a coherent and logical approach this book describes the potential use of coordinated multipoint systems supported by radio over fiber It covers an impressive breadth of topics ranging from components subsystem and system architecture to network management and business perspectives The authors show the importance of radio over fiber in eliminating or mitigating against the current perceived barriers to the use of coordinated multipoint and the drivers for standardisation activities in future mobile wireless systems over the next few years The book brings together the system concept for centralized processing including what is required for coexistence with legacy wireless systems the algorithms that can be used for improving wireless bandwidth utilization at physical and MAC layers and the radio over fiber network and link design necessary to support the wireless system Other important research is also covered as the authors look at compensating for radio over fiber impairments and providing simple network management functions A study of service provision and the

business case for such a future wireless system is also fully considered This book comes at an important time for future wireless systems with standardization of fourth generation wireless systems still ongoing The content enables readers to make key decisions about future standardisation and their own research work The business analysis also makes the book useful to those involved in deciding the future directions of telecoms organisations This information will be core to their decision making as it provides technical knowledge of the state of the art but also system level assessments of what is possible in a business environment

Networking Fundamentals Kaveh Pahlavan, Prashant Krishnamurthy, 2009-04-20
