The book then delves into the theoretical and analytical framework required to understand adaptive compensation of the magnetic inductive system ACMIS based on zero voltage switch ZVS. The chapters demonstrate how these systems are used for transmitting electric power from a single end inverter combined with a compensated network of parallel to parallel P P type and an auto tuning impedance of LC tank. The book also covers the experimental method for a multifunctional contactless power flow of the G2V mode and bidirectional outer communication and inner communication with giant magnetoresistance GMR effect for car parking guidance. The experiment shows how to analyze data transferring performance including the current trimming method and how to evaluate data transmission quality according to the relevant parameters. Overall, the book serves to familiarize automotive engineers and industry professionals involved in the electric vehicle market with the issues that surround wireless power charging and data transfer systems for electric vehicles and introduces them to more coherent designs.
