**Universal Grammar in Second-Language Acquisition** Margaret Thomas,2004-07-31 This book discusses how scholars in the west have conceived that human languages share important properties and how westerners have understood the nature of second or foreign language learning

**The Building Blocks of Thought** Stephen Laurence, Eric Margolis,2024-12-17 This is an open access title available under the terms of a CC BY NC ND 4.0 International licence It is free to read on Oxford Academic and offered as a free PDF download from OUP and selected open access locations This is a broad and authoritative study of one of the central topics in the study of the mind the origins of concepts The authors survey the debate between rationalists and empiricists which stretches back to the very beginnings of philosophy and has been at the centre of some of the most exciting research in cognitive science Many have charged that the debate is riddled with confusion or that rationalist approaches in particular are deeply problematic The Building Blocks of Thought offers a comprehensive rethinking of the foundations of this debate showing that these negative appraisals are based on misunderstandings Stephen Laurence and Eric Margolis argue that the debate should be understood to concern the nature of the unlearned psychological traits that provide the foundation for learning all concepts They go on to argue for a version of concept nativism according to which there is a rationalist account of the origins of many concepts across many different conceptual domains This rationalist view is developed around seven distinct arguments drawing on a wealth of data across the cognitive sciences which are shown to come together to form a unified large scale argument to the best explanation for a rationalist account of the origins of concepts Rounding out the case for concept nativism the book contrasts this view with the most important and influential empiricist views as well as alternative rationalist views including Fodor's infamous radical concept nativism and his claim that concept learning is impossible The Building Blocks of Thought argues for the enormous

importance of learning and culture showing how a thoroughly rationalist approach facilitates and enhances cultural learning and provides the foundations for the best overall account of the origins of concepts      *The Key of Green* Bruce R.

Smith, 2010-02-15 From Shakespeare's green-eyed monster to the green thought in a green shade in Andrew Marvell's *The Garden* the color green was curiously prominent and resonant in English culture of the sixteenth and seventeenth centuries. Among other things green was the most common color of household goods the recommended wall color against which to view paintings the hue that was supposed to appear in alchemical processes at the moment base metal turned to gold and the color most frequently associated with human passions of all sorts. A unique cultural history *The Key of Green* considers the significance of the color in the literature, visual arts and popular culture of early modern England. Contending that color is a matter of both sensation and emotion Bruce R. Smith examines Renaissance material culture including tapestries, clothing and stonework among others as well as music, theater, philosophy and nature through the lens of sense perception and aesthetic pleasure. At the same time Smith offers a highly sophisticated meditation on the nature of consciousness, perception and emotion that will resonate with students and scholars of the early modern period and beyond. Like the key to a map *The Key of Green* provides a guide for looking, listening, reading and thinking that restores the aesthetic considerations to criticism that have been missing for too long      *Production-oriented and Comprehension-based Grammar Teaching in the Foreign*

*Language Classroom* Anna Mystkowska-Wiertelak, Mirosław Pawlak, 2012-03-02 The book addresses one of the key controversies in teaching foreign language grammar which is the utility of production-oriented instruction as exemplified in the PPP sequence and comprehension-based teaching as implemented in interpretation tasks and processing instruction. It provides a thorough overview of issues related to learning and teaching grammar with a particular focus on input-oriented approaches and reports the findings of four studies which sought to compare their effects with instruction based on different forms of output practice. The findings serve as a basis for guidelines on how the two options can be successfully combined in the classroom      *Astrobiology* Julian Chela-Flores, Guillermo A. Lemarchand, John Oró, 2012-12-06 The general topic of this

book concerns the origin, evolution, distribution and destiny of life in the Universe. It discusses the transition from inert matter to cellular life and its evolution to fully developed intelligent beings and also the possibility of life occurring elsewhere, particularly in other environments in our own and other solar systems. The theoretical framework of Astrobiology may be probed with a forthcoming series of space missions which at the time of writing are being planned for the next 10 to 15 years. Advanced extraterrestrial life can also be probed by means of radioastronomy in the well-established project of search for extraterrestrial intelligence. Astrobiology pays special attention to the robust growth in our capacity to search for microorganisms as well as signals of extraterrestrial life with recent significant technological progress in planetary science and radioastronomy. The progress of the main space agencies is highlighted. Audience: This volume is aimed at advanced undergraduate and graduate students as well as researchers in the many areas of basic earth and life sciences that

contribute to the study of chemical evolution and the origin of life
