Geotechnical Engineering in the Digital and Technological Innovation Era Alessio Ferrari,Marco Rosone,Maurizio Ziccarelli,Guido Gottardi,2023-06-16 The book collects the keynote contributions and the papers presented at the 8th Italian Conference of Researchers in Geotechnical Engineering 2023 CNRIG 23 The conference was held on July 5 7 2023 at the University of Palermo Italy and it was organized under the auspices of the National Group of Geotechnical Engineering GNIG The event has been organized to promote interaction among geotechnical engineering and applied sciences with special focus on technological and digital innovations The book covers a wide range of classical and emerging topics in geotechnics including innovation in laboratory testing and in situ monitoring thermo hydro chemo mechanical behavior of geo materials computational geomechanics analyses of instability processes in seismic conditions probabilistic approaches resilience of critical infrastructures and advances in risk mitigation strategies and eco friendly solutions for soils and rocks stabilization This book is intended for postgraduate students researchers and practitioners working on geotechnical engineering and related areas

The TLS Continuum Field Guide Daniel Bloom,2024-02-28 This book provides a roadmap for implementing a powerful technique will reduce waste and accelerate flow within a process The TLS Continuum methodology The letters TLS stand for the three components of the continuum The letter T stands for the Theory of Constraints Created by Dr Eliyahu Goldratt in his book The Goal it is a critically thinking based system for determining where the obstacles lie within your organization Through the use of various tools it asks you to determine where the obstacles are in the process The purpose of the Theory of Constraints TOC involvement in the continuum is to determine what needs to be changed how to change it and how to accomplish the change TOC operates at the level of the chain looking for the weakest link It is in essence the hypothesis of the problem solving method overall The letter L stands for Lean Most organizations are familiar with the concept of Lean It is centered around removing waste from the organizational processes so that the customer receives their orders faster Understand that faster may not mean cheaper or better quality it means only that we expedite the process The final letter is S and it represents the concepts of Six Sigma The primary goal here is remove variation from the processes If we combine the three letters of the acronym what we find that the TLS continuum is organized around a process in itself We use the Theory of Constraints to locate and identify the obstacles within the system What is holding up the process Where is the weakest link in the process With the introduction of TOC the system asks you to elevate the obstacles and determine how to remove them We use Lean to do what it is meant to do and that is to remove the obstacles We have identified the obstacle and determined through the critical thinking tools how to remove that obstacle and then use the Lean tools to actually remove the waste Finally the system utilizes the Six Sigma tools to create the standard of work and remove any variation from the process When we do this we have completed the improvement process by creating a progressive

system for resolving the problems that occur within many organizations It is an evidence based effort to identify remove and improve the system so the problem does not recur *Sensors Application in Agriculture* Dimitrios S. Paraforos, Spyros Fountas, Francesco Marinello, 2020-11-06 Novel technologies are playing an important role in the development of crop and livestock farming and have the potential to be the key drivers of sustainable intensification of agricultural systems In particular new sensors are now available with reduced dimensions reduced costs and increased performances which can be implemented and integrated in production systems providing more data and eventually an increase in information It is of great importance to support the digital transformation precision agriculture and smart farming and to eventually allow a revolution in the way food is produced In order to exploit these results authoritative studies from the research world are still needed to support the development and implementation of new solutions and best practices This Special Issue is aimed at bringing together recent developments related to novel sensors and their proved or potential applications in agriculture
