

## Spare wheel

The spare wheel is secured under the rear of the vehicle in a special hinged carrier.

## Lowering spare wheel carrier

**Attention**  
When loosening the screws it is essential to keep to the following sequence:

- Loosen safety screw B until it turns freely.

**Note**

The safety screw B is held at the end with a clip so that it cannot be screwed out completely.

- Remove securing screw A completely. The spare wheel carrier then rests on the safety screw B.

**Attention**  
If the screws are loosened in the opposite sequence, the carrier can fall off screw B.

- Then insert the wheel spanner in the carrier to the stop as shown in illustration on the right.
- Grip wheel spanner firmly with both hands, lift slightly and swing to the right until the large hole in the carrier can be swung over the safety screw and down.
- Take spare wheel out.

## Lifting spare wheel carrier

- Insert wheel spanner in spare wheel carrier.
- Place wheel on carrier with wheel upwards, swing carrier up with wheel spanner and hook it on the safety screw.
- Screw in securing screw A first, then safety screw B.
- Then tighten both screws fully.

**Attention**

For safety reasons the spare wheel carrier must always be firmly secured so that the spare wheel cannot fall down accidentally.

**Note**

The rear mounting of the spare wheel carrier can be adjusted in height to cater for types of different widths.
