SAN Boot Implementation and Best Practices Guide for IBM System Storage Sangam Racherla, Delmar Demarchi, Scott Dybas, Bobby Stark, Mansoor Syed, IBM Redbooks, 2012-09-30 Booting servers from a storage area network SAN is being used increasingly in complex data center environments today due to its significant benefits over the traditional method of booting from local disks SAN Boot enables organizations to maximize consolidation of their IT resources minimize their equipment costs and realize the considerable management benefits of centralizing the boot process In SAN Boot you can deploy diskless servers in an environment where the boot disk is located on often RAID capable storage connected to the SAN The server initiator communicates with the storage device target through the SAN using the Fibre Channel host bus adapter HBA The system downtime is greatly minimized in case a critical component such as a processor memory or host bus adapter fails and needs to be replaced The system administrator needs to swap only the hardware and reconfigure the HBA s BIOS switch zoning and host port definitions on the storage server The system image still exists on the logical drive therefore the server is fully operational after the hardware swap and configuration change is completed This IBM Redbooks publication can help you with the SAN Boot implementation We present various SAN Boot scenarios using IBM System Storage products that include DS5000 DS8000 XIV and SVC The operating systems that are covered include Windows 2008 Red Hat Linux SUSE Linux and VMware

Cogo,Mario David Ganem,Hartmut Lonzer,Minja Obradovic,Gabriel Requejo,IBM Redbooks,2013-06-14 In this IBM Redbooks publication we compiled best practices for planning designing implementing and maintaining IBM Midrange Storage Solutions In this publication we use IBM System Storage DS5000 storage subsystem for the implementation procedures and the same procedures can be used for implementations with DCS3700 or DS3500 storage subsystems We also compiled configurations for a VMware ESX and VMware ESXi Server host environment Setting up an IBM Midrange Storage

Subsystem is a challenging task Our principal objective in this book is to provide you with a sufficient overview to effectively enable storage area network SAN storage and VMware There is no single configuration that is satisfactory for every application or situation However the effectiveness of the VMware implementation is enabled by careful planning and consideration Although the compilation of this publication is derived from an actual setup and verification we did not stress test or test for all possible use cases that are used in a limited configuration assessment Because of the highly customizable nature of a VMware ESXi host environment you must consider your specific environment and equipment to achieve optimal performance from an IBM Midrange Storage Subsystem When you are weighing the recommendations in this publication you must start with the first principles of input output I O performance tuning Each environment is unique and the correct settings that are used depend on the specific goals configurations and demands for the specific environment This publication is intended for technical professionals who want to deploy VMware ESXi and VMware ESX Servers with IBM Midrange Storage Subsystems

Storage and Network Convergence Using FCoE and iSCSI Sangam Racherla, Silvio Erdenberger, Harish Rajagopal, Kai Ruth, IBM Redbooks, 2014-07-18

Along with servers and networking infrastructure networked storage is one of the fundamental components of a modern data center Because storage networking has evolved over the past two decades the industry has settled on the basic storage networking technologies These technologies are Fibre Channel FC storage area networks SANs Internet Small Computer System Interface iSCSI based Ethernet attachment and Ethernet based network attached storage NAS Today lossless low latency high speed FC SANs are viewed as the high performance option for networked storage iSCSI and NAS are viewed as lower cost lower performance technologies The advent of the 100 Gbps Ethernet and Data Center Bridging DCB standards for lossless Ethernet give Ethernet technology many of the desirable characteristics that make FC the preferred storage networking technology These characteristics include comparable speed low latency and lossless behavior Coupled with an ongoing industry drive toward better asset utilization and lower total cost of ownership these advances open the door for organizations to consider consolidating and converging their networked storage infrastructures with their Ethernet data networks Fibre Channel over Ethernet FCoE is one approach to this convergence but 10 Gbps enabled iSCSI also offers compelling options for many organizations with the hope that their performance can now rival that of FC This IBM Redbooks publication is written for experienced systems storage and network administrators who want to integrate the IBM System Networking and Storage technology successfully into new and existing networks This book provides an overview of today's options for storage networking convergence It reviews the technology background for each of these options and then examines detailed scenarios for them by using IBM and IBM Business Partner convergence products
