Mullins, Eric Y. Sheu, 1999-01-31 The investigative assault upon the enigmatic asphaltenes has recently resulted in significant advances in many varied disciplines Taken individually each discipline exposes certain facets of asphaltenes but each alone can never reveal asphaltenes from all vantage points Even seemingly narrowly focused issues such as the molecular structures of asphaltenes or the colloidal structures of asphaltenes require a confluence of many lines of investigation to yield an understanding which differs from truth by diminishing uncertainty An holistic treatment of the asphaltenes is a powerful approach to evolve further their understanding For example examination of asphaltenes at the highest resolution yields molecular structure A slight increase in scale probes asphaltene colloidal structure Weaving together asphaltene studies performed at different length scales results in a fabric which envelops an encompassing vision of asphaltenes At the same time the interfaces of these hierarchical studies provide additional constraints on imagination more than investigations at individual length scales alone These considerations shaped the timing format and the content of our book The editors are very appreciative of the diligence and hard work manifest in each of the contributed chapters herein We thank the contributing authors for making this project a success Oliver C Mullins Eric Y Sheu vii **CONTENTS** I Asphaltenes Types and Sources **Soil and Aquifer Pollution** Hillel Rubin, Nava Narkis, Judith Carberry, 2013-03-09 The Water Research Institute at the Technion Israel Institute of Technology is proud to have initiated and sponsored the International Workshop Soil and Aquifer Pollution Non Aqueous Phase Liquids Contamination and Remediation held May 13th 15th 1996 on the Technion campus in Haifa Groundwater contamination is one of the pressing issues facing Israel and other countries which depend on groundwater for water supply In Israel 60% of the water supply comes from groundwater most of it from two large aquifers The Coastal Aquifer underlies the area where the largest concentration of human activity already takes place and where much of future development is expected to occur It is a phreatic sandstone aquifer vulnerable to pollution

from activities at the surface The Mountain Aquifer is recharged in the higher terrain to the east and flows first in a phreatic zone then confined westward and underneath the Coastal Aquifer This limestone aquifer has higher permeabilities and flow velocities so pollution can reach the groundwater quite readily Smaller local aquifers are also important components in the national water system While measures are taken to protect these aquifers from pollution there are locations where contamination has already occurred Furthermore accidental pollution may not be totally avoided in the future Therefore understanding the processes of groundwater contamination recommending the proper measures for preventing it and determining the best means for reclamation once pollution has occurred are of great practical importance Non aqueous phase liquids NAPLs are among the most significant contaminants

Tumor Organoids Shay Soker,Aleksander Skardal,2017-10-20 Cancer cell biology research in general and anti cancer drug development specifically still relies on standard cell culture techniques that place the cells in an unnatural environment As a consequence growing tumor cells in plastic dishes places a selective pressure that substantially alters their original molecular and phenotypic properties The emerging field of regenerative medicine has developed bioengineered tissue platforms that can better mimic the structure and cellular heterogeneity of in vivo tissue and are suitable for tumor bioengineering research Microengineering technologies have resulted in advanced methods for creating and culturing 3 D human tissue By encapsulating the respective cell type or combining several cell types to form tissues these model organs can be viable for longer periods of time and are cultured to develop functional properties similar to native tissues This approach recapitulates the dynamic role of cell cell ECM and mechanical interactions inside the tumor Further incorporation of cells representative of the tumor stroma such as endothelial cells EC and tumor fibroblasts can mimic the in vivo tumor microenvironment Collectively bioengineered tumors create an important resource for the in vitro study of tumor growth in 3D including tumor biomechanics and the effects of anti cancer drugs on 3D tumor tissue These technologies have the potential to overcome current limitations to genetic and histological tumor classification and development of personalized therapies
