Research in Computational Molecular Biology Alberto Apostolico, Concettina Guerra, Sorin Istrail, Pavel Pevzner, Michael Waterman, 2006-03-22 This book constitutes the refereed proceedings of the 10th Annual International Conference on Research in Computational Molecular Biology RECOMB 2006 held in Venice Italy in April 2006 The 40 revised full papers presented together with abstracts of 7 keynote talks were carefully reviewed and selected from 212 submissions As the top conference in computational molecular biology RECOMB addresses all current issues in algorithmic theoretical and experimental bioinformatics

Protein Conformational Dynamics Ke-li Han, Xin Zhang, Ming-jun Yang, 2014-01-20 This book discusses how biological molecules exert their function and regulate biological processes with a clear focus on how conformational dynamics of proteins are critical in this respect In the last decade the advancements in computational biology nuclear magnetic resonance including paramagnetic relaxation enhancement and fluorescence based ensemble single molecule techniques have shown that biological molecules proteins DNAs and RNAs fluctuate under equilibrium conditions The conformational and energetic spaces that these fluctuations explore likely contain active conformations that are critical for their function More interestingly these fluctuations can respond actively to external cues which introduces layers of tight regulation on the biological processes that they dictate A growing number of studies have suggested that conformational dynamics of proteins govern their role in regulating biological functions examples of this regulation can be found in signal transduction molecular recognition apoptosis protein ion other molecules translocation and gene expression On the experimental side the technical advances have offered deep insights into the conformational motions of a number of proteins These studies greatly enrich our knowledge of the interplay between structure and function On the theoretical side novel approaches and detailed computational simulations have provided powerful tools in the study of enzyme catalysis protein drug design protein ion other molecule translocation and protein folding aggregation to name but a few This work contains detailed information not only on the conformational

motions of biological systems but also on the potential governing forces of conformational dynamics transient interactions chemical and physical origins thermodynamic properties New developments in computational simulations will greatly enhance our understanding of how these molecules function in various biological events Models in Statics for Engineers Sorin Vlase, Marin Marin, Andreas Öchsner, Maria Luminita Scutaru, 2025-07-16 This book covers all the standard introductory topics in classical mechanics for the first part Statics the analysis of forces and moments acting on a mechanical system in equilibrium with its environment Starting from Newton's laws the necessary and sufficient conditions are formulated for a point rigid system to remain in equilibrium The main problems that may arise in engineering practice are analyzed and numerous problems illustrate the presentation It is well known that classical mechanics viewed as a theoretical discipline possesses an inherent beauty depth and richness and presents coherence and elegance This book tries to highlight this beauty and harmony that classical mechanics offers The long experience of the authors means that the way of presentation is intensively tested in the decades of contact with students The textbook is mainly addressed to advanced undergraduate and beginning graduate students who are interested in the engineering application of modern methods in classical mechanics The authors try to use a clear and systematic style to promote a good understanding of the subject For this part of mechanics statics the authors motivated and illustrated each concept with worked examples The book intends to provide a thorough coverage of the fundamental principles and techniques of classical mechanics The text is based on the authors many years of experience delivering lectures and seminars Most of the problems are original and will be useful not only for those studying mechanics but also for those who teach it **Differential Geometry and Analysis on CR Manifolds** Sorin

Dragomir, Giuseppe Tomassini, 2007-06-10 Presents many major differential geometric achievements in the theory of CR manifolds for the first time in book form Explains how certain results from analysis are employed in CR geometry Many examples and explicitly worked out proofs of main geometric results in the first section of the book making it suitable as a graduate main course or seminar textbook Provides unproved statements and comments inspiring further study

Differential Geometry Elisabetta Barletta, Sorin Dragomir, Mohammad Hasan Shahid, Falleh R. Al-Solamy, 2025-08-18 This book Differential Geometry Advanced Topics in CR and Pseudohermitian Geometry Book I D is the fourth in a series of four books presenting a choice of advanced topics in Cauchy Riemann CR and pseudohermitian geometry such as Fefferman metrics global behavior of tangential CR equations Rossi spheres the CR Yamabe problem on a CR manifold with boundary Jacobi fields of the Tanaka Webster connection the theory of CR immersions versus Lorentzian geometry The book also discusses boundary values of proper holomorphic maps of balls Beltrami equations on Rossi spheres within the Koranyi Reimann theory of quasiconformal mappings of CR manifolds and pseudohermitian analogs to the Gauss Ricci Codazzi equations in the study of CR immersions between strictly pseudoconvex CR manifolds The other three books of the series are Differential Geometry Manifolds Bundles Characteristic Classes Book I A Differential Geometry Riemannian Geometry and

Isometric Immersions Book I B Differential Geometry Foundations of Cauchy Riemann and Pseudohermitian Geometry Book I C The four books belong to an ampler book project Differential Geometry Partial Differential Equations and Mathematical Physics by the same authors and aim to demonstrate how certain portions of differential geometry DG and the theory of partial differential equations PDEs apply to general relativity and quantum gravity theory These books supply some of the ad hoc DG and PDEs machinery yet do not constitute a comprehensive treatise on DG or PDEs but rather authors choice based on their scientific mathematical and physical interests These are centered around the theory of immersions isometric holomorphic and CR and pseudohermitian geometry as devised by Sidney Martin Webster for the study of nondegenerate CR structures themselves a DG manifestation of the tangential CR equations
