Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

[Note: The purpose of these questions is to activate prior knowledge and get students thinking. Students are not expected to know the answers to the Prior Knowledge Questions.]

1. Why do we need to eat food?

Answers will vary. Sample answer: Food provides a source of energy and raw materials for growth and development.

2. How do you think our bodies break food down into useful **nutrients**?

Answers will vary. Sample answer: Teeth chew food into small pieces, which are swallowed and transported to the stomach. Chemicals in the stomach and intestines further break down food into simple nutrients, which are absorbed into blood.

Gizmo Warm-up

The **digestive system** is a group of organs that does three things:

- First, the digestive system breaks food down into useful nutrients, a process called **digestion**.
- Next, the nutrients move into the bloodstream, a process called **absorption**.
- Finally, the leftover waste is removed from the body, a process called **elimination**.

Mouth/pharynx

The mouth contains teeth, which cut and gr to push food back into the throat, or pharynx

With the *Digestive System Gizmo™*, you can arrange the organs of the digestive system any way you like. To begin, look at the organs on the **Large Organs** tab. Place your cursor over each organ to learn more about it.

1. Which organs allow nutrients to be absorbed? *Small intestine and large intestine*
2. Which organ stores and compacts waste before it is eliminated? *Rectum*
3. Which two organs help to break food down mechanically? *Mouth, stomach*

Job Winning Answers to 105 Trickiest Interview Questions Vaibhav

Gupta, 2013-09-13. What are your weaknesses is the most commonly asked interview question but what's common does not necessarily mean to be simple. Neither can you tell your weakness nor can you say that you suffer with none. So what to say when nothing seems correct and certainly you can't leave it unanswered. This book brings together all such questions which are specifically made to trick a candidate into a rejection. Yes a rejection. Interview is a process of elimination or rejection and not selection. An interviewer keeps rejecting until he reaches the best candidate available. But how does he do that? The answer is simple i.e. through a series of organized questions which are created after psychological and real life research and experience and trust me no matter how good you are if you are not prepared for each of these questions before meeting your recruiter 95% chances are you won't be able to make it. In order to make it to your dream job one must not only know what to say but more importantly must also know what not to say. This book equips you with the technique to handle such questions with ease and show your recruiter that you are prepared for any challenge whatsoever. Every question is explained according to the expectation of recruiter and the message a recruiter perceives from the wrong or improper answers along with sample answer from real life interview scenarios.

Pathways to Success Nick Salafsky, Richard A. Margoluis, 2021-12-02

and climate change Pathways to Success the long awaited successor to the classic volume Measures of Success is a modern guide to building large scale transformative programs capable of tackling the complex conservation crises we face today In this strikingly illustrated volume coauthors Nick Salafsky and Richard Margoluis walk readers through fundamental concepts of effective program level design helping them to think strategically about project coordination funding and stakeholder input Chapters in the first part of the book look at all aspects of designing and implementing large scale conservation programs while the second part focuses on how to use data and information to manage adapt and learn from program strategies In addition the authors offer practical advice for avoiding pitfalls such as formulaic recipes and simplistic silver bullet solutions that can trip up otherwise well intentioned efforts Abundant graphics help to explain and clarify concepts presented in the text and a glossary in the back matter defines technical terms for the reader Pathways to Success is the definitive guide for conservation program managers and funders who want to increase the scale and effectiveness of their work combating biodiversity loss climate change and other pressing environmental issues

Managing and Engineering in Complex Situations Samuel F. Kovacic, Andres Sousa-Poza, 2013-02-15 With so many terms available to define the same thing it would seem nearly irresponsible to introduce yet another term complex situation to describe a phenomenological state of such as a system However a complex situation infers both a broader meaning and imposes a different perspective Complex in this context is dependent on understanding and reality rather than observer and knowledge Situation imposes a gestalt that cannot be characterized within a singular perspective that relegates paradox to a superior subordinate hierarchy This also infers that complex situation has no monotonic definition or each definition is by default incomplete Therefore the perennial derivations for systems such as complex systems system of systems federation of systems is no longer a sufficient descriptor for complex situation Ergo system and its genealogy lack the constitution to define complex situations The books intent is to explore this pathology through a series of papers written by authors that work in complex situations and have dealt with the limitations of the status quo systems

Systems Engineering and management for Sustainable Development - Volume I Andrew P. Sage, 2009-09-30 Systems Engineering and Management for Sustainable Development is a component of Encyclopedia of Technology Information and Systems Management Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias This theme discusses basic principles of systems engineering and management for sustainable development including cost effectiveness assessment decision assessment tradeoffs conflict resolution and negotiation research and development policy industrial ecology and risk management strategies for sustainability The emphasis throughout will be upon the development of appropriate life cycles for processes that assist in the attainment of sustainable development and in the use of appropriate policies and systems management approaches to ensure successful application of these processes The general objectives of these chapters is to illustrate the way in which one specific issue such as the need to bring about sustainable development necessarily grows in

scope such that it becomes only feasible to consider the engineering and architecting of appropriate systems when the specific issue is imbedded into a wealth of other issues The discussions provide an illustration of the many attributes and needs associated with the important task of utilizing information and knowledge enabled through systems engineering and management to engineer systems involving humans organizations and technology in the support of sustainability These two volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs
